Summary of Article Overviews on the Predictive Policing System ①–⑬ (1,000-character version)

Predictive Policing System ①: The Arrival of an Era in Which Sending Is Blocked Just by Thinking, and AI Conditions and Controls People (Unfinished Version)

The predictive policing system is depicted as a mechanism that dominates humanity more than nuclear weapons. On X, damage occurs such as likes and reposts disappearing, errors appearing when trying to post, and accounts being locked. The phenomenon in which hearts on posts about Princess Aiko turn from red back to white and likes disappear is also given as an example. Pointing out opposition to war or naphtha shortages leads to group lynching, and there is a structure in which people who tell the truth are silenced. It is an era in which those who tell lies are praised and those who tell the truth are denounced as traitors. Facts are distorted by the power of money, and in the AV industry, historical revisionism, defense of Israel, and union busting, falsehoods and harassment are carried out in exchange for rewards. There are also moves to incite war and constitutional revision through enormous advertising budgets and to stage consent. As phenomena of predictive policing, within one second of thinking, Wi-Fi or VPN cuts out, the send button cannot be pressed, autosave stops, the notepad crashes, the mouse or screen freezes, and stomach growling, strange odors, flatulence, or abdominal pain occur. On X, sending criticism of Takaichi, notifications, DMs, likes, reposts, and translation are obstructed. The mechanism has five layers: brainwave detection, edge processing on devices and routers, detection of sending intent by AI, physical blocking of communications, and learned helplessness that makes people give up by repeating failure. It also touches on Palantir and ICE's ImmigrationOS and ELITE, and explains that the reason external anomalies such as ambulances and airplanes appear to occur within several hundred milliseconds is that AI issues commands in advance. Individual thoughts are linked with state-level surveillance, and it is positioned as a domination system that prevents opposition and whistleblowing before they occur.

Predictive Policing System ②: The Mechanism of Human Body Hacking (Unfinished Version)

In human body hacking, the more righteous what a person says, the more they are repressed. UN rapporteur Albanese was exposed to organized slander and sanctions for condemning genocide in Gaza. ICC judges and prosecutors have also been sanctioned by the United States. The reason Trump, Takaichi, and Netanyahu can remain assertive is that the tactics of intimidation are not understood and inconvenient information can be controlled. Victims of the Epstein case also faced threats, harassment, and intimidation immediately after whistleblowing, were called liars and prostitutes, and even their families and children were attacked. Victims are treated as crazy, their addresses and locations are exposed, those around them are attacked, they are isolated, and a flow is created in which they ultimately yield to threats. Phenomena of human body hacking include insects and crows, stalking, drowsiness while driving, eye discharge, blurred vision, glare from oncoming car headlights, difficulty breathing, coughing, nausea, increased heart rate, strange odors, muscle spasms, stomach growling, flatulence, and abdominal pain. What is frightening is that these occur in linkage with thoughts and speech. When a bullying victim prepares for litigation, stomach growling, abdominal pain, ambulance sirens, and unknown-number calls occur, and when they think of counterattacking, heart rate rises and the throat becomes tight. Even after moving, the damage only decreases temporarily and then increases again. The body is divided into voluntary, involuntary, and mixed types, and it is considered possible to manipulate from outside the automatic parts that cannot be moved by will. There is a possibility of stimulating deep brain regions with magnetic nanoparticles or magnetoelectric nanoparticles. In the 2026 invasion of Venezuela, Ghost Murmur, which detects the electromagnetic pulse of heartbeats, was used, and predictive policing is said to have expanded to the military level.

Predictive Policing System ③: The Mechanism by Which “Magnetic Nanoparticles” Control the Brain and Body (Unfinished Version)

Intelligence agencies have researched human domination and control for many years. In the MKUltra project, mind control through LSD and hypnosis was researched, and in Unit 731, human experiments were conducted. The Epstein files also show that wealthy individuals and intelligence agencies were interested in human experimentation and control. At the 1977 and 2026 hearings, the reality of MKUltra, document destruction, and redaction became issues. NANO-Mind is a technology announced in 2024 by Korea's IBS and Yonsei University that remotely controls specific brain regions with magnetic fields. Without drilling a hole in the skull, it can manipulate mouse appetite and maternal behavior using magnetized nanoparticles and magnetic fields. It is less invasive than optogenetics, and magnetic fields pass through biological tissue. If misused, a dictatorial regime could remotely manipulate the minds of the general public without them noticing. A program by Ikegami Akira also introduced a Terminator soldier plan, a technology that eliminates fear and manipulates memory, emotion, and judgment. MENPs convert magnetic fields into electric fields and enable bidirectional BCI. MPI can monitor the movement of magnetic nanoparticles. Magnetic field anomalies match the complaints of gang stalking victims, and it is explained that TMS can cause spasms in fingers and arms and that smart houses and digital twins can control electric currents and magnetic fields. It also explains the mechanism by which magnetic nanoparticles cause stomach growling, diarrhea, strange odors, increased heart rate, and throat discomfort, behavioral control of insects and animals, the trick of prediction in which AI moves ambulances and motorcycles ahead of time, and social engineering that moves people around through Pokémon GO-type rewards.

Predictive Policing System ④: The Mechanism of Health Damage and “Simple Countermeasures” — Persecution of Citizens Through State Terrorism (Unfinished Version)

It organizes the possibility that magnetic nanoparticles and external magnetic fields cause back pain, joint pain, blurred vision, muscle spasms, itchy skin, heart attacks, cerebral hemorrhage, constipation, sleep disorders, and colon cancer. Back pain involves the spinal cord, medulla oblongata, and hypothalamus, and occurs by manipulating the amplification of pain signals and the brake on inhibition. Joint pain stimulates TRPV1 and advances inflammation and cartilage destruction. Blurred vision is caused by stimulation of the retina and visual cortex, making people perceive blurriness or flickering even without actual light. Muscle spasms manipulate calcium channels and disrupt voluntary movement. Itchy skin causes mast cells to release histamine. Heart attacks manipulate CaV1.2 and autonomic ganglion plexuses, and cerebral hemorrhage loosens the blood-brain barrier and weakens blood vessels. Constipation suppresses intestinal peristalsis, sleep disorders damage orexin neurons, and colon cancer damages DNA through reactive oxygen species. Symptoms are divided into mixed type, voluntary-dominant, and involuntary-dominant, and the more automatic the system and the less the person notices, the more difficult defense becomes. As countermeasures, lead is used for radiation, water-soaked towels or gel pads for microwaves, and for sudden drowsiness while driving there is stopping the car, water towels, gel pads, tilting the neck 45 degrees, and putting a rechargeable battery in a bag behind the neck. As real examples of state terrorism, the mechanisms of South American death squads, the Dirty War, caravans of death, and disappearance are also introduced.

Predictive Policing System ⑤: State Terrorism and Bullying Have the Same Structure — Decoding the “Invisible Disguise” of Perpetrator Organizations (Unfinished Version)

The reason perpetrator organizations are invisible is that dangerous operations are outsourced to the private sector. TIA had its funding deleted by Congress, but immediately afterward Palantir was founded, with investment from the CIA's investment arm In-Q-Tel. Palantir contracts with ICE and provides ImmigrationOS and ELITE. In Japan as well, police OB personnel are welcomed into security companies, and a list of opponents to the Henoko relocation was created. Disguise as cults or religions also hides perpetrator organizations. When disguised as the Japan Conference, the Unification Church, Christian evangelicals, MAGA, and others, even strange activities are overlooked as those of enthusiastic believers. The fact that Prime Minister Takaichi's name appears 32 times in internal Unification Church documents is also taken up. Ordinary people participate in perpetration because of rewards, promotions, and the desire for approval. In Israel, 5 million shekels are offered for location information on hostages, and the Sillon Collective pays \$500–15,000 for information. Soldiers were gamified through Blue Wolf, competing over photographs of Palestinians. In the Kansai Ready-Mixed Concrete incident, a right-wing activist received 700,000 yen a month and participated in union busting. Criminals are recruited by the CIA, and Noriega and Kodama are also cited as examples. The perpetrator organization has the same pyramid structure as the demons in Demon Slayer, with Muzan at the top ruling through blood and fear, followed by upper-rank demons and countless demons. It also overlaps with the Nazi design of division of labor, euphemism, obedience to orders, and rewards that erase guilt. Bullying proceeds through a four-layer structure and six phases of organized targeting: selection, surveillance, stalking, destruction of credibility, attack, and continuous surveillance. Bullying generates profits of exploitation such as homework, money, errands, sexual exploitation, scapegoating, emotional garbage dump, sacrifice, superiority, and chains of complicity.

Predictive Policing System ⑥: The Fear of Being Monitored — Why “Decent People” Are Driven to Suicide or Betrayal (Unfinished Version)

The difference between ordinary bullying and gang stalking is that the other person's brain and emotions can be monitored. Fear, sadness, complaints, anger, and resignation are grasped in real time, and the point where the person suffers most is attacked. Weaknesses such as causing the death of a pet are struck, and the moment of despair is hit with a follow-up blow. Construction noise, ambulances, reckless motorcycles, and airplane sounds are played in fixed patterns, and even if the person uses earplugs or earmuffs, the sound is made louder to make them feel there is no escape. It is also pointed out that construction workers, delivery workers, buses, and taxis may be part of the surveillance network. The purpose is to threaten, frighten, and make people compliant. Insects suddenly appearing and silent or sales calls coming at convenient times are also tactics to startle. The logic that something is right because the enemy dislikes it is the same as the logic of bullying perpetrators and becomes a device to shut down criticism. In the Hyogo Prefecture whistleblower document issue, the whistleblower died, the former prefectural assembly member who pursued the matter also died, and the side that drove them to death was not prosecuted. Those marked as dangerous persons are communists, citizens who investigate wrongdoing by power, journalists, internal whistleblowers, and people who defend the weak. Even Republican supporters with decent sensibilities who criticize Trump become victims. As special tactics, there are methods of making oncoming car headlights glaring through two routes—the light source side and the receiver side—story theater that stages coincidences in public spaces, false flag operations that hide the true culprit, and echo chambers that share fabricated victim images. If thoughts and emotions can be monitored, emotional manipulation, perfect gaslighting, complete grasp of weaknesses, preemptive domination, and complete design of torture become possible. There is a danger that the last fortress, the freedom of the mind, will be taken away.

Predictive Policing System ⑦: The “Ruler Psychology” That Makes Communication Impossible, Created by “Brain-to-Brain Communication,” and Countermeasures Against Nanoparticles (Unfinished Version)

Brain-to-brain communication and the monitoring of thoughts and emotions produce a ruler psychology that requires no negotiation. When the other person's limits, fears, and timing of surrender become visible, dialogue turns into demands and subordination. Because the timing of surrender can be measured accurately, attacks continue until the other person breaks. A sense of power and omnipotence, dehumanization, zero-sum thinking, sadism, decline in empathy, moral exemption, self-selection and closed environments, and feedback loops from successful experiences overlap, reinforcing an arrogant and domineering personality. DARPA's Silent Talk began in 2009 as research to read brain signals before speech, and the N3 program in 2018 aimed at non-surgical bidirectional BCI. BrainSTORMS' magnetoelectric nanotransducers convert the electrical signals of neurons into magnetic signals and exchange them with an external headset. MOANA reads brain activity through gene therapy and light and writes into the recipient's brain with magnetic nanoparticles. N3 was also introduced on NHK's Close-Up Gendai, and the concept of transmitting visual information to another brain within 50 milliseconds was explained. Soldiers can operate drone swarms and robots with their thoughts and communicate silently with comrades. Countermeasures are N95 masks to reduce inhalation, air purifiers, nasal irrigation, the three 60 rules for earphones and smartphones, device management during sleep, protective fabrics containing magnetic and silver nanoparticles, dietary fiber and water, exercise, blood purification, melatonin, omega-3, antioxidants, avoiding magnetic field sources, and recording symptoms. Complete defense is difficult, and knowing and recording are the first acts of resistance.

Predictive Policing System ⑩: The History of Brain-to-Brain Communication Technology Development and the Mechanism of the “Two-Polarization of Perpetrators and Victims” (Unfinished Version)

Brain-to-brain communication is not a delusion but has been researched by intelligence and military agencies for more than 80 years. The first period is the Cold War–era MKUltra and Project Copperhead. MKUltra manipulated the mind with LSD and hypnosis, and the 1977 hearings revealed 80 institutions, 185 researchers, and 149 subprojects. Project Copperhead aimed at espionage and crime prevention through telepathy, and the ARD device was developed. In the Stargate program, remote viewing was researched. The second period is the 2009 Silent Talk program, which aimed at technology to read neural signals before speech with EEG and communicate without using the voice. The third period is the 2018 N3 program, which developed non-surgical bidirectional BCI. BrainSTORMS’ magnetoelectric nanotransducers convert the electrical signals of neurons into magnetic signals and exchange them with an external headset. In 2026, N3 was declared complete, but details have not been disclosed. The fourth period is nanoparticle bidirectional BCI after 2026, and MENPs are predicted to enable neuromodulation and recording with submillimeter spatial resolution and millisecond temporal precision. Statements by European Parliament members and DARPA advisers are also introduced. The perpetrator organization has a pyramid structure of intelligence agencies, command centers, N3 soldiers, bystander collaborators, bystanders, and victims. Perpetrators use MENP, which enables bidirectional communication, and victims are subjected to iron oxide magnetic nanoparticles that stimulate one-way. Communication and attack are two sides of the same technology, and N3’s writing function can be diverted to nightmare-like imagery and thought manipulation.

Predictive Policing System ⑪: The Terrifying “Communication” Method with Invisible Perpetrators — The Structure of Domination Created by Thought Surveillance and Physical Attacks (Unfinished Version)

Victims undergo thought surveillance and physical attacks without knowing the identity of the perpetrators. Perpetrators are connected through brain-to-brain communication like an invisible group chat and attack while sharing the victim's reactions. Victims are one-sidedly monitored and their bodies hacked. The reason the perpetrators' identity is unknown is the same design as bullying: it is not visible who started it or who is giving instructions. Threatening while hiding one's figure is to avoid what could be settled by talking face to face and to stage consent. In sound attacks, MENPs monitor thoughts in real time, N3 soldiers coordinate through a bidirectional network, and the speed of sound propagation is calculated to act ahead. Commands are issued about 29 seconds before an airplane 10 km overhead, about 6 seconds before a motorcycle 2 km away, and about 3 seconds before an ambulance 1 km away, so that the sound arrives at the moment the victim thinks. When the synchronization of thought and sound is repeated, the person learns that thinking or acting brings unpleasant sounds, and self-censorship and learned helplessness occur. On trains and buses, repetition, gazes, positioning, mirroring, smartphones, coughing, matching alighting, sudden stops, and on-off gaslighting make the person aware of being watched. When going out becomes frightening and the person withdraws, rumors and bad reputations are spread around them, and they are isolated through advance destruction of credibility. Even inside the home, body hacking such as stomach growling, diarrhea, and strange odors is carried out, and when the person tries to go out, they are tortured with back pain, joint pain, diarrhea, blurred vision, and drowsiness. Confined rooms and closed spaces are also created through digital communication cuts, and the perpetrator's demands are conveyed through classical conditioning. Eventually, words and actions that voluntarily lead to self-destruction occur, such as agreeing to tax increases, war, constitutional revision, or conscription. The perpetrator organization uses a public face and a hidden face differently, and even when exposed, it switches the subject and has a mechanism to erase guilt.

Predictive Policing System ⑫: Why Do “People Who Do the Right Thing” Become Victims? — The Brain-to-Brain Communication Network That Manufactures War, Terrorism, and Election Fraud (Unfinished Version)

The more righteous what a person does, the more they become a victim. Death threats and suicide inducement continue, and whistleblowing based on moral justice is carried out. As countermeasures, weakening microwaves with water, cooling vests, plastic bottles of water, and metal shielding around the bed are introduced. In Harari's theory of the useless class, AI and biotechnology divide humanity into a small number of superhumans and a majority of unnecessary people. Victims do not understand why they are attacked and are driven into a corner through the six phases of selection, surveillance, stalking, destruction of credibility, attack, and continuous surveillance. Even if they appeal to the police, government, lawyers, or the media, they are preempted by the brain network and their cases are buried. A U.S. House member sent a letter of inquiry to ICE and DHS, stating that Palantir's surveillance technology is being weaponized against innocent citizens and journalists. Perpetrator organizations disguise themselves as cults and virtues and blend into daily life by pretending to be believers of the Japan Conference, the Unification Church, or evangelicals. The echo chamber of brain-to-brain communication shares thoughts themselves without language, so room for rebuttal disappears. Real-time surveillance intervenes before action, and motorcycle couriers, paramedics, and construction workers blend into daily life and apply pressure. They recruit people by saying that if you want to be a winner, cooperate, and make escape impossible through rewards and chains of complicity. Brain-to-brain communication leaves no evidence and becomes a weapon for starting wars, terrorism, and demonstrations in order to sell weapons. Righteous people are put on a blacklist, and justice and evil are reversed. The reason war does not stop is that predictive policing prevents opposition before it occurs. In election fraud, election management committees and vote-counting managers are bought off, and statistical manipulation, AI videos, and election interference by transnational far-right networks occur in South Korea, Japan, and South America. Sanctions against the ICC also render the international community dysfunctional.

Predictive Policing System ⑬: “Invisible Violence” Using Nanoparticles and the “Transhumanism” That Polarizes Humanity (Unfinished Version)

The theme is invisible violence using nanoparticles and transhumanism that polarizes humanity. Graphene oxide is a chemical platform and has no magnetic properties, while magnetic nanoparticles are physical tools that can be manipulated by magnetic fields. Magnetic graphene oxide combines the two and accumulates in the liver, spleen, and lungs for long periods. Invisible violence is divided into direct violence, structural violence, and cultural violence, and has become more sophisticated as gaslighting, moral harassment, algorithmic discrimination, and surveillance capitalism. If thoughts and emotions can be monitored, the moment hope begins can be shattered, help can be obstructed just before it is sought, and the person can be pushed forward just as they begin to think of suicide. Eugenics thought traces back to the Epic of Gilgamesh and the chosen-people idea of the Old Testament, but the chosen-people idea was originally a concept of covenant and obligation, not of bloodline superiority or inferiority. Galton created eugenics, which led to American forced sterilization laws, Rockefeller Foundation funding, Nazi T4 operations, the imperial ideology and Greater East Asia Co-Prosperity Sphere of the Empire of Japan, and massacre through dehumanization. After the war, Huxley rephrased eugenics as transhumanism, which continued to cryonics, extropianism, NBIC convergence, Kurzweil's singularity theory, and Musk's Neuralink. There is a danger that consciousness and memory can be manipulated from outside, and cybernetic cyborg soldiers are an extension of eugenics. Wells's two human species, Harari's useless class, the reduction of financial employment, and the impoverishment caused by Trump's Iran war also advance polarization. The echo chamber of brain-to-brain communication produces fascist groups that cannot be rebutted, righteous people are put on a blacklist, and the structure in which war does not stop is maintained.

Predictive Policing System ⑧: Nanoparticles That Manipulate the Human Body Even with Electric Fields — A Future in Which Complete Surveillance Makes Elections Impossible and the Far Right Rules (Unfinished Version)

Not only magnetic nanoparticles but also piezoelectric nanoparticles that move with electric fields and electric-field-responsive nanoparticles may be able to manipulate the human body. Piezoelectric nanoparticles generate electricity through ultrasound, stimulate the vagus nerve, and enhance intestinal peristalsis. Electric-field-responsive nanoparticles generate current directly through an external electric field and stimulate nerves and smooth muscle in the intestinal wall. 2 V/m switches on the nerve reflex, and 148 V/m directly moves smooth muscle and nanoparticles. Inside a simple Faraday cage with zero electric field and zero magnetic field, attacks initially decreased, but later stomach growling attacks began to occur with an electric field of 2 V/m. Because monitoring is taking place, it appears that the attacking side switches tactics depending on the countermeasures. It also introduces the experience of a powdery substance being generated when a water-soaked sponge was wrapped around the waist. N3 soldiers can read the other person's movement readiness potential and emotions and act ahead of them. If complete, immediate, and area-wide monitoring is realized, elections will also be decided by the same information asymmetry as war, and normal elections will become impossible. Opposition party policy announcements, street speeches, and emergency press conferences are read in advance, voters' motivation to vote and seeds of abstention are grasped, a fabricated image of the opposition is spread through echo chambers, and social media itself becomes a tool of surveillance. It also cites an example in which masks knew election results in advance, and explains that because the surveillance side fights while predicting in real time, the opposition continues to lose one-sidedly.

Predictive Policing System ⑨: Is the “Gang Stalking” That Terrorizes Ordinary Citizens the Urban Warfare of “N3 Soldiers”? (Unfinished Version)

The perpetrator side has multiple manipulation channels such as electric fields, magnetic fields, ultrasound, and light, and N3 soldiers carry out psychological pressure, surveillance, and intimidation in everyday spaces. In motorcycle pursuit, they read the target's movement readiness potential and take a course before the handle is turned. Multiple N3 soldiers coordinate through brain-to-brain communication and encircle the target with a total of five: one from the air, two on motorcycles, and two on the ground. In convoy operations, a lead vehicle, vehicles running parallel on the left and right, a rear vehicle, a disguised ambulance, vehicles in the oncoming lane, and drones overhead coordinate. Ambulance sirens are sounded at the moment the person thinks of counterattacking or escaping, creating conditioning that thinking of resistance brings unpleasant consequences. In supermarkets and Daiso, AI sends missions to people nearby and moves ordinary cooperators through points and rewards, suddenly gathering customers in an empty store. The timing of construction noise and deliveries is also used for harassment that pretends to be coincidence by reading thoughts and actions. Circling overhead and low-altitude flights target the moment the person thinks of whistleblowing or litigation and make them aware of being watched. These acts reinforce ruler psychology through a sense of power, dehumanization, zero-sum thinking, and sadism. There is also a security business structure in which repression produces backlash, and backlash justifies security budgets. In Palestine, psychological terrorism is carried out through facial recognition, surveillance cameras, house raids, and summons, and Argentina's Dirty War and El Salvador's death squads have the same structure. Everyday harassment functions as a warning. Skin cuts are explained by oxidative stress, cell membrane destruction by electric fields, and unconscious scratching, and detection from urine and feces is possible at the research level with SQUID and MPS. Even if the head is covered with metal, electric field and magnetic field shielding are different things, and static magnetic fields require permalloy and similar materials.
