Summary of Article Overviews on the Predictive Policing System ①–⑬ (2,000-character version)

Predictive Policing System ①: The Arrival of an Era in Which Sending Is Blocked Just by Thinking, and AI Conditions and Controls People (Unfinished Version)

The Anomaly of Disappearing Sends and Likes

On X (Twitter), there are many reports of damage such as likes and reposts disappearing, errors appearing when trying to post, and accounts being locked for inconvenient posts. Even on posts about Princess Aiko, the like heart turns from red back to white, and likes disappear. It is a strange phenomenon that even a former detective cannot explain, and there is a possibility that someone is deliberately manipulating it.

Repression When Telling Facts or Opinions

There is an example of a person who appealed against war using a rabbit drawing and was subjected to group lynching by net-uyoku and silenced. In May 2026, tightening conditions in the Middle East caused a naphtha shortage, and Calbee announced it would change the packaging of 14 products, including potato chips, to silver. Prime Minister Takaichi explained that supply was expected to continue, but shortages continued on the ground. Pointing out the naphtha shortage reveals the administration's lack of capability, so there is a structure in which people who tell the truth are silenced through group lynching.

Facts Distorted by the Power of Money

In Western countries, if you have money, you can hire people to lie for you. In the AV industry, if you pay a large sum, you can hire women to say things different from their true feelings, and women who tell the truth are subjected to group lynching. Historical revisionism and historical falsification have also continued because entertainers who are no longer selling and young men seeking quick fortunes can get money by saying “there were no comfort women,” “there was no Nanjing Massacre,” “I support constitutional revision,” “Chinese people have bad manners,” and “Koreans are anti-Japanese.” There is a mechanism in Japan in which telling the truth does not benefit you and you are attacked by a group.

The Phenomena of the Predictive Policing System

When you think of writing something inconvenient for the AV system, the Japanese government, fascism, or cults such as the Japan Conference, communication is cut within one second of thinking. Phenomena include Wi-Fi or VPN cutting out, the send button not being pressable, autosave stopping, the notepad app crashing, the mouse or screen freezing, and the device starting to move when the power cord is unplugged. On X, when trying to send criticism of Takaichi, there is interference such as the send button not being pressable, notifications not arriving, DM notifications not appearing, likes and reposts disappearing, and the translation function not working. Torture of the human body also occurs, with phenomena such as the stomach rumbling, a strange odor, flatulence, and abdominal pain within one second of thinking.

The Mechanism That Can Block Within Several Hundred Milliseconds

For humans to recognize causality, the cause and result need to be within one second, or at most within two to three seconds. To make the other person feel causality, it is necessary to observe cognition and cause an event within several hundred milliseconds. By combining brainwave sensors, edge processing, intent detection by AI, physical blocking of communications, and learned helplessness, it is possible to block sending just by thinking. Smartphones, earphones, smartwatches, routers, base stations, satellites, and other devices can become surveillance devices. Palantir provides ICE with tools for facial recognition, social media surveillance, and location tracking, building a massive surveillance system.

The Aim of Conditioning and Domination

When interfered with repeatedly, humans give up, thinking “I’ve had enough.” This is learned helplessness, a technique also used in the CIA’s interrogation manual. The predictive policing system blocks people the moment they think of whistleblowing and ultimately makes them give up. Because it can obtain all of the other person’s thoughts and weaknesses and control them freely, the wealthy, tech companies, and financial elites are trying to create a world in which torture or disadvantage occurs just by thinking of defying them. The aim is to create a world in which no one can defy fascists such as Israel, Trump, Netanyahu, and Takaichi.

Predictive Policing System ②: The Mechanism of Human Body Hacking (Unfinished Version)

Repression of People Who Say the Right Thing

UN Special Rapporteur on the situation of human rights in the Palestinian territories Francesca Albanese was subjected to an organized smear campaign and illegal sanctions for condemning Israel's genocide in Gaza. The French government demanded her resignation, but she refused. Against the International Criminal Court as well, the Trump administration imposed large-scale sanctions on judges and prosecutors in retaliation for the arrest warrant for Prime Minister Netanyahu. A structure in which telling the right thing leads to loss is being created at the international level. The reason Trump, Takaichi, and Netanyahu can remain assertive is that the other side does not understand the tactics of intimidation. There is an intention to control inconvenient facts and information.

Victims of the Epstein Case

Marina Lacerda, a victim of the Epstein case, was threatened immediately after publicly stating that she had been sexually abused at age 14. After her name was published 46 times without redaction in Justice Department documents, the harassment intensified. She was called a "liar" and a "prostitute" online, and her 12-year-old daughter was bullied at school. Currently, she sleeps with a gun by her pillow. Of the 23 accusers identified by Reuters, almost all have experienced threats, harassment, and intimidation. Victims are labeled "crazy" or "mentally ill," rumors and bad reputations are spread, their addresses and locations are exposed, those around them are attacked, they are isolated, and they are ultimately made to yield to threats.

Symptoms of Human Body Hacking

Former CIA officer John Kiriakou revealed that the CIA had developed the ability to remotely control automobiles and carry out assassinations disguised as accidents. However, now it is an even more terrifying era of human body hacking. In surveillance and stalking-related phenomena, there are insects attacking, crows cawing at convenient times, and people following the target appearing when going out. In attacks that feel like killing intent, there are drowsiness while driving, eye discharge making it hard to see,

vision suddenly blurring, and oncoming car headlights becoming glaring. In breathing and heart-related phenomena, there are throat tightness that feels like breathing stops, coughing, severe nausea, and abnormally increased heart rate. In smell, muscle, and digestive-related phenomena, there are strange odors, muscle twitching and spasms, frequent stomach growling, frequent flatulence, and sudden abdominal pain.

Separation of Consciousness and Automatic Processes

The human body is divided into mainly automatic systems (involuntary), mainly controllable by conscious will (voluntary), and mixed types (automatic + conscious). Arms and muscles can be moved by will, but digestion is automatic. When writing litigation documents, if the automatically moving stomach and intestines are controlled from outside to cause diarrhea or abdominal pain, the work the person is doing by their own will can be obstructed. By manipulating the automatically moving parts from outside and inserting interference into the process, a system can be created in which whenever the person tries to do something, they are always disturbed or obstructed.

Magnetic Nanoparticles and Brain Manipulation

At the research level, approaches using magnetic nanoparticles and magnetoelectric nanoparticles are advancing. MENPs convert external magnetic fields into local electric fields and have the potential to wirelessly control and record neural activity in deep brain regions. Appropriately designed MENPs are predicted to enable neuromodulation and recording of deep brain and cortical regions with submillimeter spatial resolution and millisecond temporal precision. The possibility that magnetic fields are being used for control is high, and blocking and defense are difficult.

The Venezuela Invasion and Ghost Murmur

On January 3, 2026, the U.S. military carried out a large-scale military raid named “Absolute Resolve” against Caracas, the capital of Venezuela. More than 150 aircraft were mobilized, and President Maduro and his wife were taken aboard a U.S. warship. At least 40 people died in this operation, of whom 32 were Cuban military personnel. President Trump stated that he used a “secret energy weapon” to neutralize Venezuela’s defenses and further mentioned a system called “Ghost Murmur.” Ghost Murmur is a remote sensing system based on quantum magnetometry technology that detects the

electromagnetic pulses produced by human heartbeats, and AI separates the signals within a range of thousands of square kilometers. The detection range reaches about 65 kilometers and can cover 1,000 square kilometers. The U.S. military may have used the predictive policing system to complete location identification and attack before Cuban soldiers realized they were being targeted. This shows that the predictive policing system can be expanded and applied from individuals to the national, military, and geopolitical levels.

Predictive Policing System ③: The Mechanism by Which “Magnetic Nanoparticles” Control the Brain and Body (Unfinished Version)

The History of Human Domination by Intelligence Agencies

In the CIA's MKUltra project, mind control research using LSD and hypnosis was conducted, and in Unit 731, human experiments were repeated. In 1977, about 20,000 pages of financial records were found through a Freedom of Information Act request, and a Senate committee held joint hearings. CIA Director Turner testified that MKUltra mobilized 80 institutions and 185 researchers and supported 149 subprojects. There were also cases in which LSD and other substances were used without the person's consent at universities, hospitals, prisons, and other locations. In 2026, a House task force held hearings again. Professor Kinzer criticized MKUltra as “constituting medical torture.” The biggest problem is that in 1973 CIA Director Helms ordered the destruction of related documents. Because of the destruction of records and redaction, the full picture remains unclear today.

What Is NANO-Mind?

NANO-Mind was developed by a research team at Korea's Institute for Basic Science and Yonsei University. Published in Nature Nanotechnology on July 2, 2024, this research succeeded for the first time in the world in freely controlling specific brain regions using magnetic fields. By combining magnetized nanoparticles with magnetic fields, specific brain regions of mice can be remotely controlled. There is no need to drill a hole in the skull or perform invasive surgery; it is completely wireless and requires no surgery. The research team succeeded in increasing mouse appetite by 100% by activating inhibitory neurons in the medial preoptic area of the brain. Conversely, when these neurons were excited, food intake decreased by more than 50%. Female mice with no reproductive experience showed maternal behavior of carrying pups to the nest and raising them when the medial preoptic area was stimulated. Nano-MIND is a technology that can freely remotely control animal behavior.

discrimination becomes automated. If thoughts and emotions can be monitored in real time, it is possible to accurately grasp what the other person fears most and grieves most and attack pinpointedly. Shattering hope when it begins, obstructing when the person tries to seek help, and pushing the person forward when they begin to think of dying—this is the core of the system that drives people to suicide. Because the monitored side does not notice that they are being watched, this violence is invisible.

Eugenic Ideology and the Self-Staged “World Police Play”

Eugenic ideology is the idea that we are superior to other humans and that it is right to exclude and dominate inferior beings, and it has been used to justify war and terrorism. It is said that ISIS, which turned the Middle East into a war zone, was a firestarter planted by Mossad and the CIA to make countries fight each other, and that troubled Middle Eastern countries buying expensive weapons from the Israeli and U.S. militaries and forming military alliances was a self-staged world police play. If a group that will not listen to the other side is placed on one side, conflict continues forever. Groups that share the narrative of chosen-people ideology are essentially cults and extremists, and whether Christianity, Islam, or Shinto, and whether the country or region differs, the essence is the same. The origins of eugenic ideology trace back to Gilgamesh’s quest for immortality. The chosen people of the Old Testament was originally a religious concept referring not to bloodline superiority or inferiority but to a special obligation accompanying a covenant with God. On the Origin of Species in 1859 brought a revolution to biology while also inviting dangerous misuse, and Darwin’s cousin Galton coined the word eugenics in 1883. Initially it advocated benevolent goals and was supported by many influential people and intellectuals, and it was discussed with almost the same logic as today’s transhumanism. In the United States, the world’s first forced sterilization law was enacted in 1907, about 30 states had similar laws by the 1930s, and the Rockefeller Foundation provided large amounts of funding. The Nazis used this American-origin eugenics as a reference, and it became the theoretical basis for the T4 euthanasia program in which about 250,000 people with disabilities were killed. The Empire of Japan also linked it with imperial ideology and carried out mass massacres under the ideal of the Greater East Asia Co-Prosperity Sphere. By defining enemies and targets of domination as inferior beings and dehumanizing them, the guilt of soldiers was numbed and massacre was justified. Massacre begins with hate speech, and considering that organized and institutionalized form of it to be gang stalking makes sense.

The Rebranding of Eugenics — The Birth of Transhumanism

After the war, the word eugenics became taboo, but the ideology itself did not disappear; it was merely rebranded. Julian Huxley served as the first Director-General of UNESCO and in 1957 coined the word transhumanism, arguing that the new eugenics was the fusion of humans and machines. The essential goal of improving humans did not change; only the words changed.

The Institutionalization of Transhumanism — From Cryonics to Singularity

In the 1980s, the Alcor Life Extension Foundation was established and began activities to freeze bodies in liquid nitrogen after death and aim for future resuscitation. In the 1990s, Max More advocated extropianism and systematized as a philosophy the overcoming of human limits through technology. In the 2000s, Ray Kurzweil predicted that humans and AI would merge in 2045.

Neuralink and the Threat of Manipulating Consciousness and Memory

The modern symbol is Elon Musk's Neuralink, which succeeded in its first human trial in January 2024, but many monkeys had died in animal experiments. The structure in which the person who bought X runs a brain chip company and is at the same time a major contractor for the U.S. military is an extremely dangerous concentration of power. If consciousness and memory can be manipulated from outside, there will no longer even be a need to hide it. Journalist Whitney Webb's question to Ray Kurzweil, "Why don't you just turn me off?" and his answer, "Trust us," highlight the essence of the problem.

Cybernetic Cyborg Soldiers — An Extension of the Logic of Eugenics

Cybernetic cyborg soldiers are the same as the logic of eugenics, which aimed to remove undesirable traits, and because they can be realized in real time by directly intervening in one person's brain, they are a more efficient means.

The "Useless Class" — A Polarized Future

H. G. Wells predicted that two human species would emerge. There is a sales pitch that if everyone is upgraded it will become a utopia, but the people promoting it do not want everyone to be upgraded. What they are really aiming for is the revival of a feudal system

in which defiance is absolutely impossible, and the core final conclusion is how to create a slave class that can never even cognitively rebel. Historian Yuval Noah Harari warns that advances in AI and biotechnology will divide human society into a small elite class and a majority useless class. The useless class is not merely the unemployed but those who cannot be employed, and they lose not only economic value but also political power. In fact, the Trump administration's continuation of the useless and contrary-to-national-interest Iran war and destruction of the American economy can also be considered a process of producing a useless class whose property and land are taken and who are economically unnecessary.

The Brain-to-Brain Communication Echo Chamber Makes Rebuttal Impossible

Within the brain-to-brain communication network, values are shared directly as emotions and images without language, so there is no room for rebuttal, and external facts and evidence are invalidated. When the value that the Empire of Japan was right becomes an absolute premise, people will never admit guilt even when evidence is presented. This is structurally the same as the process by which the Nazis shared the falsehood that Jews were an inferior race at the national level and justified the Holocaust.

The Paradox of Power and Moral Disengagement

The reason people become unreasonable rulers within the brain-to-brain communication network is that information asymmetry produces the sense of the eye of God and destroys empathy. Psychologist Dacher Keltner points out that having power lowers empathy, and in Albert Bandura's moral disengagement, viewing the other person as an enemy or data makes one stop feeling guilt. Closed groups, confidentiality, strict hierarchy, and a culture of obedience cultivate values that emphasize loyalty and domination over empathy.

Brain-to-Brain Communication Weapons and Why War Does Not Stop

Brain-to-brain communication is a weapon for manufacturing war, selling weapons, and expanding domination, and people who do the right thing are the greatest threat, so they are systematically put on a blacklist and treated as perpetrators even though they are victims. The reason war does not stop even though more than 70% of the people oppose it is that the predictive policing system prevents opposition and resistance before they

occur. Traitors are mobilized by ideologically steeped cults and war maniacs and subjected to intense attacks. The other person's pain becomes fuel for the perpetrator's sense of justice—this is the psychological mechanism by which war continues to escalate. Continuing to ask why. That is the first step toward not complicit in this structure.

Differences from Optogenetics

Conventional optogenetics required drilling a hole in the skull, inserting an optical fiber, and irradiating light. This was invasive and difficult to apply to animals moving freely. With Nano-MIND, ion channels are incorporated into target brain cells through genetic manipulation, and the channels can be opened and closed simply by applying a magnetic field from outside. By generating a magnetic field with a small actuator and switching the ion channels on, mind control through completely wireless remote control without surgery became possible. Magnetic fields pass through biological tissue, so they pass through the skull and reach deep brain regions. Magnetized nanoparticles are extremely small and can circulate through the body in the bloodstream, and can also be targeted to specific brain regions.

The Danger If a Dictatorial Regime Obtains It

If an authoritarian government finds an effective way to remotely control the minds of the general public using nanoparticles, a mind control program could be executed without the public even noticing what is happening. The magnetized nanoparticles at the core of the Nano-MIND system may already be contained in many daily products, from food to vaccines. In many cases, they never touch the consciousness of ordinary people. In other words, it becomes possible to build a foundation for remote control without anyone knowing. Like AI, nanotechnology can become an existential crisis for humanity. An Ikegami Akira program also introduced a “Terminator soldier plan,” a technology that artificially manipulates memory, emotion, and judgment, gives fighting spirit, and eliminates fear. The U.S. military has set a goal of realizing cyborg soldiers by 2050.

The Mechanism of Sending and Receiving with Magnetic Nanoparticles

Nano-MIND is a technology that manipulates the brain from outside, but technology to transmit brain signals to the outside is also being developed. The key is magnetoelectric nanoparticles. MENPs have the property of converting external magnetic fields into local electric fields. Using this property, an electric field can be generated from nanoparticles by applying a magnetic field, stimulating neurons. Conversely, it is also possible to detect the electrical activity of neurons as changes in magnetic fields. In other words, MENPs can become a platform for realizing bidirectional brain-computer interfaces.

Appropriately designed MENPs are predicted to enable neuromodulation and recording of deep brain and cortical regions with submillimeter spatial resolution and millisecond

temporal precision. In May 2026, it was confirmed that MENPs induce neural activity in living adult human cerebral cortex slices.

MPI Technology and Magnetic Field Anomalies

Magnetic particle imaging detects and images the nonlinear magnetization of superparamagnetic iron oxide nanoparticles. It is characterized by no X-ray exposure and high temporal and spatial resolution. In January 2025, an MPI system for imaging the human brain was developed. This system uses a mechanically rotating permanent magnet-based field-free line and generates a magnetic field of up to 7 mT_{peak} with a 26 kHz drive coil. The receive coil is designed to fit the human head and can continuously acquire images with a temporal resolution of 5 seconds per image. MPI can also map brain activity by detecting changes in cerebral blood flow. Technology that can constantly monitor the movement of magnetic nanoparticles introduced into the brain and track their position and activity in real time is already at the stage of practical application. The fact that gang stalking victims report abnormalities in magnetic fields and magnetic flux density is consistent with Nano-MIND and MENPs technology. Just as TMS can cause fingers to spasm by applying a magnetic field to the head, it is scientifically possible to control the human body with magnetic fields.

The Mechanism of Physical Symptoms

Stomach growling is the sound produced when gas and liquid mix during the peristaltic movement by which the stomach and intestines move contents. By targeting magnetic nanoparticles to the vagus nerve or enteric nervous system and stimulating them with an external magnetic field, peristalsis can be artificially enhanced. Diarrhea occurs when intestinal movement becomes too fast and there is no time to absorb water. By delivering magnetic nanoparticles to the intestinal wall or vagus nerve and stimulating them with an external magnetic field, the parasympathetic nervous system can be activated and intestinal movement accelerated. Strange odors can be made to be perceived even in the absence of odor by targeting magnetic nanoparticles to the olfactory nerve or olfactory bulb and stimulating them with an external magnetic field. Heart rate can be artificially increased by targeting magnetic nanoparticles to the cardiac ganglion plexus or vagus nerve and stimulating them with an external magnetic field. Throat discomfort and difficulty breathing are caused by manipulation of the vagus nerve or respiratory center.

Control of Insects and Animals

In July 2022, a research team at Rice University in the United States succeeded in an experiment in which iron oxide magnetic nanoparticles were injected into the brains of genetically modified fruit flies and stimulated with an external magnetic field. Within just 0.5 seconds after pressing a button, the flies spread their wings. The magnetic nanoparticles generate heat in the magnetic field, and the heat opens ion channels and fires neurons. Bees and moths are also insects, and if magnetic nanoparticles are targeted to neural circuits that control aggressive or avoidance behavior and stimulated with an external magnetic field, it is in principle possible to make them fly toward specific humans or induce aggressive behavior. Behavioral control of mammals has already been demonstrated in mice. In the Nano-MIND research, it was shown that introducing magnetic nanoparticles into mouse brains and stimulating them with an external magnetic field can accurately manipulate complex behaviors such as appetite, social interaction, and maternal behavior. Dogs and cats are also mammals, and their basic brain structures are common, so it is technically possible to make them vocalize or trigger specific behaviors.

Why It Happens Within Several Hundred Milliseconds, and Social Engineering

External anomalies occur within several hundred milliseconds because AI issues commands to both sides several seconds in advance. When magnetic nanoparticles or MENPs are sent into the brain and a magnetic field is applied from outside, the particles move, generate heat, or convert the magnetic field into a local electric field. That stimulation fires nerve cells and evokes specific sensations or impulses. Because the brain does not distinguish the source of stimulation, the person feels it as “something I thought of myself.” AI schedules “I will send you a thought of ●● in a few seconds” and, several seconds before that, sends a command to paramedics to “sound the siren in a few seconds.” The moment you actually have that thought, the siren sounds, and the sound arrives within several hundred milliseconds. Thoughts are used not as triggers but as synchronization signals. The reason people around you behave strangely is that they are being moved indirectly through smartphone app “games” and “rewards.” Pokémon GO uses location information to move people to specific places. If the same mechanism is applied to the predictive policing system, AI monitors your location and behavior patterns and sends missions to people around you. Completing missions earns points and gives bonuses and perks. People around you move as if completing game quests. John Hanke, founder of Pokémon GO developer Niantic, started his company with funding from a CIA investment arm, and the technology was acquired by Google. In 2026,

an investigation by the Dutch newspaper Trouw reported that Niantic had provided about 30 billion pieces of player scan data to the American defense contractor Vantor. This data is said to have been used to train AI models for navigating drones and other devices at centimeter-level accuracy in environments where GPS is unavailable.

Why They Can Massacre Without Hesitation

The reason fascists like Trump, Netanyahu, and Takaichi can massacre without hesitation, repeat wrongdoing, and still remain assertive is that there is technology supporting them. The predictive policing system, thought surveillance, and human body hacking technology—remote brain control through magnetic nanoparticles, reading of brainwaves, constant monitoring through MPI, and automation of prediction and social engineering through AI—when these technologies combine, rulers try to prevent opposing opinions before they occur, condition individuals who resist, and ultimately create a world in which no one can defy them. If merely thinking of defying them leads to torture or disadvantage, people will be conditioned, and eventually no one will be able to defy the fascists. That is the true aim of the predictive policing system, thought surveillance, and human body hacking.

Predictive Policing System ④: The Mechanism of Health Damage and “Simple Countermeasures” — Persecution of Citizens Through State Terrorism (Unfinished Version)

Back Pain, Joint Pain, and Blurred Vision

Back pain occurs when pain signals from the muscles and bones of the lower back pass through the spinal cord and reach the brain. Pain signals can be amplified along the spinal cord, and magnetic nanoparticles can manipulate this amplification. Joint pain occurs when TRPV1, a pain sensor, is repeatedly stimulated, inflammation advances, and cartilage is destroyed. If technology that binds TRPV1 antibodies to magnetic nanoparticles and stimulates them with magnetic fields is reversed, joint pain can be artificially induced. Blurred vision can be caused by injecting magnetic nanoparticles into the eye to manipulate pressure on the retina or by sending abnormal signals to the visual cortex of the brain, making the person perceive blurriness or flickering even though nothing is actually visible.

Muscle Spasms, Itching, Heart Attacks, and Cerebral Hemorrhage

Muscle spasms can be caused by magnetic nanoparticles deforming cell membranes and stimulating calcium channels, disrupting signals from motor nerves to muscles. Itchy skin can be caused by magnetic nanoparticles stimulating mast cells and releasing histamine. Heart attacks occur when magnetic nanoparticles affect calcium channels and disrupt the heart's electrical flow. Cerebral hemorrhage risk can be increased by using magnetic fields to generate heat in magnetic nanoparticles, temporarily loosening the blood-brain barrier, and weakening blood vessels.

Constipation, Sleep Disorders, and Colon Cancer

Constipation can be caused by gathering magnetic nanoparticles in the intestinal wall and suppressing intestinal movement with a magnetic field. Sleep disorders occur when magnetic nanoparticles accumulate in sleep centers such as orexin neurons and are stimulated by magnetic fields, disrupting rhythms. Colon cancer risk may increase when magnetic nanoparticles accumulate in normal colon cells and are repeatedly stimulated by magnetic fields, causing chronic generation of reactive oxygen species and accumulation of DNA damage.

Grouping of Symptoms

The ten symptoms are divided into three groups. The mixed type is back pain, joint pain, and blurred vision, striking the boundary between pain and sensation. The voluntary-dominant type is muscle spasms, taking away parts that should be moved by one's own will. The automatic-dominant type is itchy skin, heart attacks, cerebral hemorrhage, constipation, sleep disorders, and colon cancer, directly manipulating organs and nervous systems that the person cannot control. The combination of magnetic nanoparticles and magnetic fields skillfully strikes the boundary between parts moved by one's own will and parts that move on their own, and its true terror lies in the fact that the person is unlikely to notice and defense is difficult.

Simple Countermeasures

Radiation can be blocked with lead. Microwaves are absorbed by water, so wrapping a water-soaked towel or gel pad around the neck can reduce the effects. For drowsiness attacks while driving, countermeasures include stopping the car, water towels, gel pads, tilting the neck 45 degrees, and putting a rechargeable battery in a bag behind the neck. These are symptomatic treatments, and for a fundamental solution it is desirable to become able to block magnetic fields.

Systems in Which the State Harms Its Citizens

Death squads were white terror groups that assassinated dissidents and citizens in Central and South America during the Cold War. They are characterized by taking off military or police uniforms, operating in civilian clothes, and pretending to be unofficial while state institutions are involved. The Dirty War was state terrorism by the Argentine military regime from 1974 to 1983, in which 22,000 to 30,000 people were killed or disappeared. The Caravan of Death was a Chilean operation ordered by General Pinochet that traveled by helicopter around the country and shot 97 political prisoners. These massacres were overlooked for many years because evidence was erased through the mechanism of disappearance. However, the truth did not disappear, and many involved are now being tried for crimes against humanity. Gang stalking can also be considered one of the systems in which a state using overwhelming high technology harms its citizens.

Predictive Policing System ⑤: State Terrorism and Bullying Have the Same Structure — Decoding the “Invisible Disguise” of Perpetrator Organizations (Unfinished Version)

Why Perpetrator Organizations Are Invisible

Organizations that do wrong are not caught because they outsource to the private sector so that no traces lead back to them. To avoid the risk of wrongdoing being exposed when governments change, dangerous work is separated from the official government. In 2002, DARPA tried to build a surveillance system called TIA that would centrally collect citizens' phone calls, emails, medical records, and other data, but Congress deleted its funding in 2003 on privacy grounds and it was closed. Immediately afterward, in 2003, Palantir was founded, with the CIA's investment arm In-Q-Tel as the sole investor. The functions of TIA, which had been stopped by Congress, were revived as a private company's product. Palantir now has a \$30 million contract with ICE and provides ImmigrationOS. In Japan as well, the police's surveillance function has been transplanted to security companies that are destinations for OB officials. The security company that created a list of opponents to the U.S. military base in Henoko had a former Superintendent General of the Tokyo Metropolitan Police Department welcomed as an advisor. If the police surveilled directly, it would be criticized as political repression, but if a security company does the same thing as security work, it looks like private business. A multilayer firewall is in place so that even if a problem occurs, disciplining the lower-level subcontractor does not reach the upper levels.

Disguise as Cults and Religions

Perpetrator organizations disguise themselves as right-wing groups, the Japan Conference, the Unification Church, and other cults. Even if they engage in strange activities, they are overlooked without being pursued because they are enthusiastic cult believers. The damage caused by the Unification Church has existed in Japan for more than 50 years, but it became widely known for the first time when the perpetrator of the assassination of Shinzo Abe was a second-generation believer. In a Diet answer on March 12, 2026, Prime Minister Sanae Takaichi admitted that her own name appears 32 times in internal Unification Church documents but denied any connection with the

organization. Many politicians at the center of political power are united with such organizations—this shows that organized penetration is nearing completion. Many citizens were taken over by fascism without realizing it.

Why Ordinary People Participate in Perpetration

The reason perpetrator organizations can produce large numbers of voluntary collaborators is that there is a reward system. The Israeli government promised Gaza residents who provided information on the location of hostages a reward of 5 million shekels (about 140 million yen) and departure from the country. The surveillance network “Sillon Collective” has published a program that pays students \$500–1,500 and doctors up to \$7,500 for information on individuals classified as anti-Semites. In the Israeli military, a game was held in which soldiers competed over how many photographs of Palestinians they took, and the unit that took the most photographs was given rewards such as leave. By turning human rights violations into point-earning, soldiers participate in surveillance and informing without guilt. Money, safety, promotion, approval from peers—just that alone turns many people from decent human beings into perpetrators. Holding weaknesses is also a powerful means of producing collaborators. There are also reports of tactics in which Israeli intelligence agencies target the gay community of Palestinians, grasp the weaknesses of people persecuted for their sexual orientation, and threaten them to cooperate in exchange for protection, turning them into informants.

Union Busting and Recruitment of Criminals

In the Kansai Ready-Mixed Concrete incident, management hired right-wing activists to crush the Rengo union. Right-wing activist Seto revealed that he had a business outsourcing contract with a ready-mixed concrete company executive and received 700,000 yen a month. In this incident, union members were arrested for strike as a crime, and the number of arrests reached 81, but acquittals followed later. Taking money to carry out harassment—this is actually happening. Criminals are used as pawns because only the state can cover up crimes. The CIA has used mafia members and drug traffickers as operatives since the 1940s. General Noriega of Panama had a contract with the CIA for \$200,000 a year and was allowed to smuggle cocaine in return, but when his usefulness was lost, he was indicted for drug trafficking involvement. Protecting criminals as assets and discarding them when they are no longer needed—this is the

logic of intelligence agencies. The CIA also recruited members of Japanese organized crime groups and used yakuza for numerous dirty jobs.

The Same Pyramid Structure as the Demons in Demon Slayer

In Demon Slayer, Muzan Kibutsuji gives his own blood to humans to create demons and controls them through fear and bait. The structure of perpetrator organizations is the same. Upper-rank demons are the powerful, wealthy, and financial elites such as Elon Musk, Trump, Takaichi, and Netanyahu; they blow the dog whistle, dangle rewards, and gather lower-rank demons using sexual desire, money, and the desire for approval as bait. Lower-rank demons are net-uyoku, antifa, MAGA, Unification Church believers, right-wing activists, and others; they are drawn by bait and attack in groups. Demons devour people. Perpetrator organizations are the same: they use force as a weapon to exploit people and kill those who complain of harm or try to counterattack. Demons do not value their comrades, and if the bait runs out, they devour even their comrades. Perpetrator organizations also easily discard lower-level people if they are not profitable. The system is designed so that people do not have to feel guilt. In the Nazi massacre of Jews, railway workers only managed transport schedules, government office workers only processed documents, and factory workers only made parts—no one thought they were murderers. Philosopher Hannah Arendt called this the banality of evil. Modern perpetrator organizations have the same design. In the reward system, the excuse “I’m just being paid” works; division of labor and anonymity mean each person is just making a small post; euphemism covers cruelty; immersion in the system means no one takes responsibility; and approval from peers reinforces the act. “It’s my job,” “I was just told to do it,” “It’s fine as long as I don’t get caught”—this is how perpetration is self-justified.

The Structure of State Terrorism and Bullying

State-level repression is the same as school bullying because the process of target selection and attack is identical. Bullying consists not only of victims and perpetrators but also of an audience that incites and bystanders who look the other way. Bullying perpetration is a means with the purpose of gaining status, and perpetrators are popular while not being particularly liked by those around them. The surrounding people tolerate the perpetrator—this is the biggest reason bullying persists. The six phases of organized targeting are selection, surveillance, stalking, destruction of credibility, attack, and continuous surveillance. In selection, people who stand out, people with weaknesses, and people who defy are chosen. In surveillance, weaknesses are collected without the

person knowing. In stalking, the illusion is created that maybe only oneself is strange. In destruction of credibility, rumors that the person is crazy or a conspiracy theorist are spread, and isolation is institutionalized. In attack, the victim is made out to be the bad person and violence is justified. In continuous surveillance, there is no escape even after moving. When one participates in bullying, the perpetrator and hangers-on gain benefits. Bullying is the most efficient exploitation system. When vegetables were harvested in a school vegetable garden, if there was bullying, everyone feared becoming the target and offered them to the perpetrator. "I'll give you this, so forgive me"—in this way, perpetrators can easily obtain more benefits without working. The profits of exploitation include having others do homework, extortion, errands, sexual exploitation, making cheat sheets, scapegoating, emotional garbage dump, sacrifice that increases group cohesion, satisfaction of superiority and the desire for approval, and strengthening of domination through chains of complicity. The common structure is domination through fear and the absence of escape. Collaborators learn that if they cooperate with the perpetrator, they too can exploit others, and at the same time they become a chain that cannot escape because of evidence of complicity. Exploitation is an efficient way for them to profit, but because they cannot win in a fair contest, they always try to gain an advantage through cowardly means such as hacking, secret photography, surveillance, and exposure of weaknesses. This structure is the same at the national level. The predictive policing system also functions as a warning by driving targets into a corner, so that no one defies those in power, and domination and exploitation can be stabilized and maintained. In other words, gang stalking is also a crime of power.

Predictive Policing System ⑥: The Fear of Being Monitored — Why “Decent People” Are Driven to Suicide or Betrayal (Unfinished Version)

Why It Drives People to Suicide

What makes gang stalking terrifying is that it is a system that drives people to suicide. Because it can monitor the other person's brain and emotions, it grasps in real time states such as fear, sadness, complaining, and anger, and persistently attacks the point where the person suffers most with pinpoint precision. It can observe the other person's emotions and choose the most effective way to drive them into a corner—this is the cruelty of gang stalking. It accurately grasps weaknesses, such as causing the deaths of pets one after another for someone who loves pets, mentally weakens the person, and drives them to suicide without their noticing. It strikes at the moment of despair and shatters the moment hope begins. This is the true nature of the system that drives people to suicide. Overseas, many cases of victims being driven to suicide have been reported, and the United Nations has also received reports of cyber torture through collective stalking and electromagnetic waves and issued warnings.

Evidence of Monitoring

Sounds in the neighborhood, construction noise, reckless motorcycle sounds, ambulance sirens, airplane sounds, and other noises are heard in fixed patterns and cause stress. When the victim counters with earplugs or earmuffs, the sounds become inaudible for a while, but eventually become louder and audible again. Because monitoring is taking place, it can be said that the sounds produced are changed to be louder based on the victim's reactions. By persistently continuing to do what the person dislikes, the victim is mentally driven into a corner. It is an extremely malicious human destruction system. When someone is targeted, construction work suddenly occurs frequently around their home, and construction noise is heard at convenient times every day. The workers may simply be producing sounds as instructed by AI, but at the same time monitoring is also taking place with a time lag, so it is thought that the strength of the blows is changed based on the victim's reactions. As for industries, construction workers, trucks, buses, taxis, trains, delivery companies, and postal delivery workers are often pointed out. It is

said that delivery companies have introduced Palantir, so delivery workers themselves become part of the surveillance network like moving cameras.

The Purpose of Monitoring and Insects, Animals, and People

The purpose of monitoring is to threaten and frighten the other person and make them compliant. The biggest feature of fascist domination is that while shouting about security, it does not protect the safety of the people but instead plunges them into fear and suspicion and dominates them for personal gain. Both Trump and Takaichi advocate a strong country and security, yet the country grows poorer and the safety and rights of the people are increasingly lost. They want to threaten and frighten the other person and make them compliant so that rivals who defy them are gone and they can do as they please. As a tactic to startle, ants and other insects may suddenly appear on the body. By turning off the switches of skin sensory nerves while moving and suddenly turning them on, it feels as if an insect has teleported onto the body. Sometimes silent calls or sales calls suddenly come at convenient times and startle the person. These are aimed at monitoring, frightening, and threatening.

The Logic That “It Is Right Because the Enemy Dislikes It”

“Military expansion is right because China dislikes it,” “weapons exports are right because North Korea dislikes it”—this kind of logic is used by perpetrators to justify their actions and is a dangerous suspension of thought that replaces the other party’s displeasure itself with proof of correctness. In April 2026, Higashino Koji said on television regarding the government’s lifting of the ban on exports of lethal weapons that if China and North Korea dislike it, then maybe it is conversely a good policy. This is circular reasoning. China is the enemy, China dislikes it, therefore it is right, therefore China is the enemy—starting from the premise that China is the enemy, treating what the enemy dislikes as proof of correctness, and reconfirming that it is the enemy through that correctness. It only proves one’s own claim by oneself, and the rightness or wrongness of the act is not examined. The emotion of dislike and the norm of right or wrong are completely different things. Bullying perpetrators continue bullying precisely because the victim dislikes it. The logic that the other person’s displeasure equals correctness is completely identical to the logic of bullying perpetrators. This logic also functions as a device to shut down criticism. If one says it is right because China dislikes it, anyone who opposes the policy is labeled a friend of China or a traitor. In workplaces and communities as well, when excluding a particular employee or resident, perpetrators

claim that they are doing the right thing because that person dislikes it. The more the excluded person suffers, the more convinced the perpetrators become of their own correctness. The other person's pain becomes fuel for the perpetrator's sense of justice—this is why bullying and gang stalking continue to escalate. To avoid being deceived by this logic, judge by what the act itself brings about, not by what the other person thinks. Seeing through the intention behind the words of someone who says something is right because the enemy dislikes it is the first step toward not complicit in the perpetrator's logic.

The Hyogo Prefecture Whistleblower Document Issue

The reason people who pursue perpetrators are instead driven to suicide is that perpetrator organizations systematically crush the pursuers as a warning. In March 2024, a man who was the director of the Nishi-Harima Regional Bureau anonymously distributed documents describing suspicions of Governor Motohiko Saito's power harassment and receipt of gifts. The prefecture identified the man and gave him a three-month suspension, and on July 7 the man died leaving audio data. Later, the report of the Hyakujo Committee pointed out that the prefecture's response was a search for the whistleblower in violation of the Whistleblower Protection Act and that the disciplinary action was illegal disadvantageous treatment. But the sacrifice did not end with the whistleblower. Hideaki Takeuchi, a former prefectural assembly member who had pursued the governor as a member of the Hyakujo Committee, was found dead at home on January 18, 2025. Takeuchi had resigned as a member because of severe slander on social media, and fellow assembly members testified that they were very frightened by a situation like a faceless group lynching. Even more puzzling is the judicial judgment. Takashi Tachibana was sent to prosecutors on suspicion of threatening Assembly Member Okuya and was not indicted in December 2025, but in June 2026 the Kobe No. 2 Committee for the Inquest of Prosecution resolved that the non-indictment was improper. However, the Kobe District Public Prosecutors Office, as a result of reinvestigation, again decided not to indict on September 25, 2026, and closed the investigation. The whistleblower died, the assembly member who pursued the matter died, and the person who drove them to death was not indicted on suspicion of threats—this puzzling ending functions as a warning that pursuing those in power will destroy you. In Hyogo Prefecture and the Kagoshima Prefectural Police, incidents have occurred in which employees who blew the whistle internally were driven to suicide. There are also reports of severe pain, and it has been pointed out that this may not be merely psychological pressure but may include physical attacks.

People Marked as Dangerous Persons

Peter Thiel, founder of Palantir, has a strong hostility toward communism and socialism and has stated that he will never sell products to communist countries. Co-founder Joe Lonsdale has also said that Palantir was built to kill communists. Palantir is a company that strongly asserts a particular position, providing AI weapons to the Israeli military and placing full-page pro-Israel advertisements in the New York Times. In the fighting in Gaza, about 70% of the dead were said to be women and children, and serious humanitarian concerns have been raised. Against this background, it becomes clear that what Palantir wants to protect is the Epstein class, and what it views with hostility and marks are communists, decent citizens who investigate wrongdoing by the privileged class, and people who speak honestly without flattering and lying. Those selected as victims are women who are not obedient to men, feminists, internal whistleblowers, public-interest whistleblowers, ordinary citizens and journalists investigating wrongdoing by power—in short, decent people and people with a strong sense of justice. Right or left, party affiliation does not matter much; even Republican supporters and MAGA people with decent sensibilities who criticize the Trump administration for covering things up instead of protecting victims in the release of the Epstein files are becoming victims. It seems to be a mechanism that targets people who defend the weak and victims or criticize perpetrators. Conversely, many perpetrators are the type who cover up wrongdoing or abandon and exploit the weak and victims, such as criminals. Honest people are victims, liars are perpetrators. What these fascists want to destroy, even if it means massacring people around the world, is probably the BRICS countries such as China, Russia, and Iran. First they destroy the economies of the United States and Japan and take wealth from the people, dominate men as fascist soldiers and women as sex slaves, and ultimately invade and destroy—this seems to be the true aim.

Oncoming Car Headlights and Story Theater

There are two possible attack routes for the phenomenon of oncoming car headlights feeling glaring. The first is an attack on the light source side, irradiating the oncoming car's headlights with energy such as microwaves to artificially increase actual brightness. The second is an attack on the receiver side, using magnetic nanoparticles and magnetic fields to stimulate the retina or the brain's visual cortex and amplify the glare signal. If it looks the same when filmed with a camera, the possibility of an attack on the light source side is high; if there is a difference between the filmed video and the perceived

glare, the possibility of an attack on the visual cortex is high. The reason it feels glaring on some days and not on others is that there are days when the external attack is turned on and days when it is off. Story theater is an organized play that perpetrators stage around the target in public spaces while pretending to be coincidences. Examples include a man suddenly shouting on the street, a woman walking ahead suddenly running, a group of several thug-like people appearing, and people in mourning clothes or a hearse appearing at convenient times. Similar situations occur at abnormal frequency in accordance with the target's movements. The terrifying thing about this tactic is the structure in which only the target understands the meaning while it looks like an ordinary scene to those around them. The target becomes convinced that it is a message directed at them, but even if they explain it to someone, it only looks like they are imagining things. By repeating this, people around them begin to suspect mental illness. In other words, story theater is a psychological operation to systematically destroy the target's very sanity and isolate them from society. A false flag operation is a secret operation in which a government or organization makes its own actions look like the work of another entity. In the 1939 Gleiwitz incident, Nazis wearing Polish military uniforms attacked a radio station, and in the 1931 Mukden Incident, the Kwantung Army blew up the railway itself and made it look like the work of the Chinese army. What these have in common is the structure of creating a narrative that they are the ones being attacked, hiding their position as the attacker, and justifying it. When the victim begins to try to find out who is doing it, the perpetrator organization cleverly places false clues and makes the victim fight unrelated people. The perpetrator organization, the true culprit, can simply watch the fight from afar. The attack is happening. The victim is suffering. But no one knows who is doing it. By creating this state, the perpetrator organization can continue attacking without taking any risk.

Echo Chambers and Thought and Emotion Monitoring

An echo chamber is an information environment in which the same opinions and information are repeatedly shared, reinforcing a closed worldview. The reason perpetrator organizations need echo chambers is that they are essential for sharing and spreading a fabricated image of the victim and shutting down the truth. Within the echo chamber, labels such as that person is crazy, a conspiracy theorist, in it for the money, anti-Japanese, a traitor, a spy are attached to the victim. By repeatedly sharing these labels, participants gain the conviction that they know the truth and come to treat the victim as someone who should be excluded from society. Echo chambers are created organizationally through hierarchy in group chats and motivation through rewards. In the

MAGA echo chamber, government officials and the Trump family are placed at the top, major influencers receiving paid campaigns in the middle, and ordinary influencers who satisfy their desire for approval by conforming at the bottom. When an incident occurs, White House or campaign spokespeople instruct a unified response talk through group chats. They appear to be speaking freely but are actually acting according to a script. Victims come to think that maybe they are the ones who are wrong, that speaking out will only get them attacked more, and that they have no choice but to give up. This is a collective version of gaslighting, and if people can be brainwashed into thinking they are to blame, they can be made unable to seek help. Within the echo chamber, false information that it is so-and-so who is attacking the victim is shared, and the victim ends up fighting unrelated people and cannot reach the real perpetrator. The perpetrator organization can make spontaneous collaborators within the echo chamber carry out attacks without dirtying their own hands and keep the true culprit hidden forever. Monitoring thoughts and emotions takes away the freedom of the mind, the last freedom humans have. What you are thinking is always grasped, what you are feeling is always monitored, who you trust is always known, and what you fear is always used. This is the Thought Police depicted in George Orwell's 1984. However, in 1984, thoughts could not be read. Now that technology is becoming a reality. The most terrifying thing is that this technology is being justified and introduced under the beautiful names of counterterrorism, maintaining public order, and efficiency. Your mind is already ceasing to be yours alone.

The Mechanism by Which Perpetrator Organizations Are Invisible

Perpetrator organizations are outsourced to the private sector, move through rewards, use criminals as pawns, and disguise themselves as cults. The attack process proceeds through exactly the same six phases as school bullying. The reason such a terrifying system has been overlooked is that a mechanism has been created in which perpetrators blend into ordinary people, act ahead, and always cover things up. The person next to you, the person you pass at the supermarket, the person commenting on social media—they may be participating in the lower levels of a perpetrator organization without knowing it. As with the victims of the Epstein case, victims' personal information is spread, bad reputations and rumors are spread to isolate them, and they are made out to be mentally ill and forced into hospitalization. And fascist regimes such as Trump, Netanyahu, and Takaichi continue to increase, and the fascist domination system is spreading around the world disguised as the predictive policing system. You yourself may be targeted without knowing it. The moment you think that maybe only you are

strange may be the moment the gang stalking system has already begun to bare its fangs at you.

Predictive Policing System ⑦: The “Ruler Psychology” That Makes Communication Impossible, Created by “Brain-to-Brain Communication,” and Countermeasures Against Nanoparticles (Unfinished Version)

The Psychological Mechanism by Which Brain-to-Brain Communication Produces Domination

In 2026, President Trump has started a war with Iran and is carrying out an outrage that destroys the American economy and lives and economies around the world. U.S. military bases have been destroyed, many weapons including F15s and F35s have been shot down, and although most Americans and U.S. soldiers oppose the war, he continues to attack persistently. Considering the sense that he can monitor and manipulate the other side with a system like the eye of God, this inexplicable behavior becomes somewhat understandable. Normally, negotiation is established because there is uncertainty. Because it is not known what the other person's limits are, how serious they are, and how far they can compromise, both sides probe each other and compromise. However, if the other person's thoughts and emotions can be monitored, this uncertainty disappears. Whether the other person is bluffing, whether they are already about to break inside—everything is visible. Then negotiation becomes unnecessary, the other person changes from a partner in dialogue to an object of manipulation, and communication becomes only demands and subordination. With monitoring, it is clear as day which attack is working and when the other person's limit will come. If it is known that the other person can still endure, more pressure is applied; if it is known that they are about to break inside, one more push will make them surrender; if it is known that they intend to continue resisting, attacks continue until that will is crushed. Monitoring functions as a sensor that accurately measures the timing of surrender. As a psychological mechanism, a sense of power and omnipotence, dehumanization, zero-sum thinking, and sadism and the desire to dominate overlap. The sense of being able to see the other person's inner world produces the omnipotence of standing at God's viewpoint and lowers empathy. When the other person's thoughts and emotions are visible as data, the other person changes from a human being into a piece, prey, or object of a mission. The moral disengagement proposed by psychologist Bandura is exactly this state, and by viewing the other person as an enemy or data, one stops feeling guilt. Empathy is established by imagining the other person's inner world, but if all of the other person's thoughts are visible, the room for imagination disappears. Psychologist Dacher Keltner points out in

the power paradox that having power lowers empathy and makes it easier to treat others as tools. Self-selection and closed environments cultivate the ruler temperament, and successful experiences fixate it. Research shows that people with Dark Triad tendencies such as Machiavellianism, narcissism, and psychopathy are easily attracted to and selected for occupations in which power and information advantage can be obtained. Closed groups, confidentiality, strict hierarchy, and a culture of obedience cultivate values that emphasize loyalty and domination over empathy. Brain-to-brain communication itself does not change personality; extreme information advantage and power asymmetry distort human psychology. If there are ethical oversight, reciprocity, accountability, and external checks, the tilt toward the ruler temperament can be mitigated, but if brain-to-brain communication is introduced into military and intelligence settings without checks, there is a danger that the ruler temperament will be institutionalized and amplified.

U.S. Military Brain-to-Brain Communication Technology

The Silent Talk program is a research program DARPA began in 2009, aiming to enable person-to-person communication on the battlefield by analyzing neural signals without using vocal conversation. The brain generates the words it wants to convey as neural signals before actually moving the mouth, and 200–500 milliseconds before vocalization, content-level information about what the person is about to say can be extracted. The N3 program began in 2018 under DARPA and aimed to develop technology enabling high-speed, bidirectional communication between the brain and machines without requiring surgery. In the BrainSTORMS project led by Battelle, nanoparticles called magnetoelectric nanotransducers that mutually convert magnetic fields and electric fields are used. They are first injected into the circulatory system and guided to target brain regions with a magnet; when neurons fire, they convert electrical signals into magnetic signals that pass through the skull and are sent to an external headset. Conversely, when magnetic signals are sent from the headset, they are converted into electrical signals and stimulate neurons. In Rice University's MOANA project, gene therapy and light are combined to read brain activity and write to another brain with magnetic nanoparticles. The goal is to convey the visual experience of a sighted person to the brain of a blind person, and the entire process of reading, conversion, and writing must be completed within 50 milliseconds. The N3 program was declared complete on the DARPA website on April 30, 2026, but details on whether the technology actually works have not been provided. If it had succeeded, and if there were commanders like Trump or Hegseth who disregard international law and force illegal acts, it would be

entirely unsurprising if they were forcing the use of this technology in actual combat or against ordinary citizens.

Countermeasures Against Magnetic Nanoparticles

For the magnetic nanoparticle system to function, three stages are necessary: particles enter the body, they are manipulated by magnetic fields from outside, and the manipulated particles act on nerve cells. Countermeasures aim to cut off one of these. Because magnetic nanoparticles mainly enter the body through the respiratory tract, wearing an N95-equivalent mask, operating an air purifier with a HEPA filter, and nasal irrigation with saline solution are effective. It has been confirmed that static magnetic fields generated by earphones and mobile phones amplify the accumulation of magnetic nanoparticles in the brain by more than five times, and the three 60 rules are proposed: use earphones no more than 60 minutes a day, at volume no more than 60% of maximum, and no more than 60 minutes continuously. Management such as not placing a smartphone by the pillow when sleeping, keeping the Wi-Fi router away from the bedroom and turning it off at night if possible, and using wired LAN is also effective. Methods include wearing clothing made of protective fabric containing magnetic or silver nanoparticles, especially using hats and scarves that protect the head and neck, and using a face shield over exposed parts such as the eyes, mouth, and nose; however, these are at the research stage and have limited effect against static magnetic fields. The main route for excreting magnetic nanoparticles that have entered the body is from the liver via bile into feces, and intake of dietary fiber, hydration, regular eating habits, and promotion of metabolism through exercise promote excretion. At the research level, devices that separate magnetic nanoparticles in the blood with magnets and the effectiveness of neuroprotective substances such as melatonin, omega-3 fatty acids, vitamins C and E, polyphenols, curcumin, and linalool have been confirmed. Adjusting daily life is also effective, such as understanding environmental magnetic field sources, not staying for long periods near substation equipment or large motors, not standing near a microwave or IH cooker while it is in use, and not bringing electronic devices into the bedroom. When you feel something abnormal, take immediate action: if you smell a strange odor, leave the place and ventilate; if palpitations or difficulty breathing suddenly occur, rest and breathe deeply and slowly; if abdominal pain or diarrhea occurs, note the time and situation. Record the time, place, symptoms, and situation in detail. If possible, keep video and audio records, and if communication failures occur, take screenshots. At present, complete defense does not exist, but it is possible to reduce risk by combining multilayer approaches. The most important thing is to know and to record. This system

functions on the premise that you do not notice. Wearing a mask, limiting earphones, regulating bowel movements, and recording symptoms—these actions themselves are the first resistance to the system.

To Break the Chain of Domination

Information asymmetry produces the sense of the eye of God and makes negotiation unnecessary; predictive superiority turns the other person into an object of manipulation; disuse of empathy makes one look down on the other person and dehumanize them; moral disengagement erases guilt and justifies domination; self-selection and closed environments cultivate the ruler temperament, and successful experiences fixate it. This mechanism stands on the same psychological foundation from bullying to international conflict. Brain-to-brain communication technology functions as a device that makes this mechanism of domination more efficient, optimized, and hesitation-free. If you are placed in such a situation, do not keep it to yourself; gather information, investigate, and try to share it.

Predictive Policing System ⑧: Nanoparticles That Manipulate the Human Body Even with Electric Fields — A Future in Which Complete Surveillance Makes Elections Impossible and the Far Right Rules (Unfinished Version)

The Anomaly After the Blog Was Published

When I wrote about magnetic nanoparticles and created a simple Faraday cage to set the electric field and magnetic field to zero, human body attacks decreased at first. However, eventually a 2 V/m electric field arose inside the cage, and the stomach growling attack began again. There seems to be an aim to emphasize that there is no escape. By hacking the body, it can be said to be a program for crushing whistleblowers and covering things up that keeps threatening and applying pressure so that the person cannot escape or whistleblow. Through monitoring, it controls the victim's reactions to prevent pursuit of the true culprit, and through various staging and information control, it causes misunderstandings and misleads, creating a mechanism by which the truth cannot be reached. Thought monitoring can continue under any circumstances, and human body hacking cannot be completely prevented with zero electric and magnetic fields, but it seems it can be weakened. Because it can switch freely according to the other person's movements, it can be turned into lies, mistakes, or incorrect information—that is the terrifying thing about monitoring. The terrifying thing about modern society is that reality and facts can be freely distorted and history falsified through AI and other means.

Nanoparticles That Move with Electric Fields

Besides magnetic nanoparticles, there are nanoparticles that can be moved by electric fields. Piezoelectric nanoparticles generate electricity when subjected to mechanical pressure. In a 2024 study, capsaicin was bound to these particles and bound to sensory endings of the vagus nerve in the stomach mucosa; when ultrasound was irradiated from outside, the particles generated electrical pulses and stimulated the vagus nerve. When the vagus nerve is stimulated, intestinal peristalsis becomes active. If piezoelectric nanoparticles are forcibly made to generate electricity with ultrasound and the vagus nerve is stimulated, it is in principle possible to artificially enhance intestinal movement and cause stomach growling. Electric-field-responsive nanoparticles respond directly to

external electric fields. When conductive polymer or gallium nitride nanoparticles are placed near the intestinal wall and an electric field is applied from outside, the particles generate local currents that directly stimulate nerves and smooth muscle in the intestinal wall and cause intestinal contraction. Both ultimately result in abnormally active intestinal peristalsis and stomach growling and flatulence. The difference from magnetic nanoparticles is the energy used for manipulation.

The Mechanism by Which Electric Fields Cause Stomach Growling

2 V/m is a strength at which peripheral nerves begin to feel stimulation; it stimulates sensory fibers of the vagus nerve, signals reach the nucleus tractus solitarius in the brainstem, parasympathetic reflex occurs, intestinal peristalsis is enhanced, and stomach growling and flatulence occur. 2 V/m is thought to move the intestines indirectly through neural reflex. 148 V/m is an electric field far stronger than the threshold for nerve stimulation and directly moves the intestinal smooth muscle itself or the intestines through nanoparticles in the body. Calcium channels in the smooth muscle cell membrane open, calcium ions flow into the cells, smooth muscle contracts, and stomach growling and flatulence occur. A 1962 study confirmed that contraction occurs in cat intestinal smooth muscle with an electric field of 0.5–2 V/cm, and 148 V/m is within this range. If electric-field-responsive nanoparticles or piezoelectric nanoparticles are present in the body, the nanoparticles generate electrical signals, stimulate nerves and smooth muscle in the intestinal wall, and forcibly cause intestinal contraction. 2 V/m is the image of switching on the nerve, and 148 V/m is the image of directly moving the muscle itself or the nanoparticles.

Complete Monitoring and Elections

Under complete monitoring, normal elections cannot be held. This is because the surveillance side can grasp voters' thoughts, emotions, hesitation, motivation to vote, and seeds of abstention before action. The moment an opposition candidate thinks about where, among which groups, and what to appeal to in order to win, their thoughts are read, and surprise attacks by the opposition become impossible. Before reaching voters, the opposing candidate's camp acts ahead and crushes it, and the motivation to vote and seeds of abstention among opposition supporters can be identified in advance and access to polling stations obstructed. All of the opposition candidate's weaknesses, health conditions, family relationships, and past failures are grasped and can be exposed at the optimal timing. An atmosphere of resignation that this candidate cannot win can

be planted well before election day. The monitored side is read first no matter what they think, and from the surveillance side the election battle is almost transparent, making it less an election than management of the opposition's collapse. If a system like Palantir's Gotham is applied to election management, voters' social media posts, purchase histories, location information, human relationships, and medical records are databased and analyzed by AI. Echo chambers function most effectively in election campaigns, and labels such as anti-Japanese, traitor, and friend of China are systematically spread against the opposition, and no matter how correct the policies they advocate, they are shut down by labels. The predictive policing system can grasp voters' emotional states in real time, and the moment opposition supporters think of going to vote, that intention is read. Before the election, messages such as "the opposition can't win anyway" are spread on social media, polling stations are reduced in areas with many opposition supporters, and individually optimized messages such as "your vote is wasted" are delivered. Social media itself has become a tool of surveillance, with interference such as the send button not being pressable, notifications not arriving, and likes disappearing. As Elon Musk's former partner exposed, Musk knew the election results several hours before they were announced. If the thoughts of all citizens are monitored, it is easy to know the voting results in advance, and a camp that knows the results in advance can optimize how many resources to invest in which districts to win. Under complete, immediate, and area-wide monitoring, the monitored side continues to lose one-sidedly in normal elections. More precisely, normal elections cannot be held. Even if the majority of citizens oppose war now, a future is not far off in which a constitutional revision election can somehow be won so that war can be waged. There is a possibility that a future will come in which fascism cannot be defeated in either war or elections.

Summary

I have explained nanoparticles that can be controlled by electric fields. Piezoelectric nanoparticles generate electricity through ultrasound, stimulate the vagus nerve, enhance intestinal movement, and cause stomach growling. Electric-field-responsive nanoparticles generate current directly through external electric fields, stimulate intestinal nerves and muscles, and cause stomach growling. 2 V/m switches on the neural reflex, and 148 V/m directly moves muscles and nanoparticles. In the past, one could say it was fine because there were morals, ethics, and laws, but now is an era in which the U.S. president, prime ministers, and major corporations ignore laws and constitutions and do as they please, so the Epstein class will do any wrongdoing if possible. The most important thing is to know and to record. Moreover, paper is

preferable to digital. This system functions on the premise that you do not notice. Recording symptoms and sharing information—these actions themselves are the first resistance to the system.

Predictive Policing System ⑨: Is the “Gang Stalking” That Terrorizes Ordinary Citizens the Urban Warfare of “N3 Soldiers”? (Unfinished Version)

Multiple Manipulation Channels

The perpetrator side is thought to have multiple manipulation channels so as not to be exposed. They combine nanoparticles that can be manipulated by electric fields, magnetic fields, ultrasound, and light, and may also be linked with artificial satellites. N3 soldiers read the other person's movement readiness potential and emotional patterns in real time and probabilistically predict actions several hundred milliseconds to several seconds ahead. It is not future prediction but ultra-high-speed behavioral prediction, and it is used to apply psychological pressure, surveillance, and intimidation in daily life.

Encirclement by Motorcycles and Convoys

While riding a motorcycle, they read the other person's movement readiness potential and take a course before the handle is turned. Multiple N3 soldiers share neural information through the N3 link, and the direction in which one wants to escape, read by one soldier, is instantly grasped by all. From the victim's side, the connections of the group chat are invisible, and they fall into suspicion about who the enemy is. A convoy consists of a lead vehicle, parallel vehicles, a rear vehicle, a disguised ambulance, vehicles in the oncoming lane, and drones overhead. The ambulance reads the moment the person thinks of counterattacking or escaping and, before it turns into action, sounds the siren at full volume to intimidate. It is conditioning that makes the person self-censor through the conditioning that thinking of resistance brings unpleasant consequences.

Supermarkets, Construction Noise, Deliveries, and Circling Overhead

The sudden increase in customers at supermarkets is thought to involve many ordinary collaborators moved by smartphone app missions and points. AI sends instructions to people nearby to mark the target or line up at the register, and when the target finishes shopping, the store returns to being empty like the tide going out. Construction noise blends into daily life and can pretend to be coincidence, so it is used to condition the person to give up and accept the situation by producing sound at the most effective timing, such as starting a rock drill at the moment the person thinks of filing a lawsuit.

Delivery workers also read the movement readiness potential and appear the moment the person leaves the front door or immediately after returning home, making them aware that their life rhythm is being grasped. In circling overhead, they target the moment the person thinks of whistleblowing and shift to low-altitude flight, showing irregular sounds and shadows to make the person feel their life is being monitored.

Psychological Changes in N3 Soldiers and the Security Business

The reason N3 soldiers feel no resistance is that a sense of power and omnipotence, dehumanization, zero-sum thinking, and sadism and the desire to dominate overlap. Surveillance and harassment become the security business itself, and there is a structure in which repression produces backlash and backlash produces budgets. In Palestine, daily surveillance is carried out through facial recognition and surveillance cameras, conditioning people through psychological terrorism. The reason they deliberately carry out repression even though they know it will produce backlash is that backlash itself becomes a pretext for the next repression and justifies budgets. Harassment in everyday spaces functions as a warning, and by thoroughly driving one person into a corner, it silently tells others that this is what happens if you defy. Because that experience cannot be proven, it is dismissed as imagination, and that itself is the aim of the system.

Predictive Policing System ⑩: The History of Brain-to-Brain Communication Technology Development and the Mechanism of the “Two-Polarization of Perpetrators and Victims” (Unfinished Version)

Brain-to-Brain Communication Is Not a Delusion

It is a mistake to laugh off the experience of thoughts leaking outside as science fiction or persecutory delusion. Governments and intelligence agencies have researched technology connecting brain to brain and brain to machine for more than 80 years. From Cold War–era CIA psychic research to modern DARPA nanoparticle BCI, that lineage has continued without interruption. Intelligence agencies also have a history of secretly targeting and experimenting on some ordinary people and silencing them, as in the Epstein files and MKUltra.

Cold War–Era Psychic Research

In 1952, the CIA began the MKUltra project and tried to manipulate the human mind through LSD, hypnosis, and sensory deprivation. At the 1977 Senate hearings, CIA Director Turner testified that 80 institutions, 185 researchers, and 149 subprojects were mobilized. However, most of the related documents were destroyed in 1973 with the approval of the CIA Director, and the full picture remains unclear today. The FBI and CIA also aimed to develop a transmitter capable of sending and receiving thoughts in Project Copperhead. It was impossible with the technology of the time, but the direction of research was established. In the CIA’s Stargate program, research on remote viewing continued, and its technological ambition was passed on to later generations.

Silent Talk and the N3 Program

In 2009, DARPA allocated \$4 million to the Silent Talk program and aimed at technology to detect neural signals before speech with EEG and communicate without speaking. In 2018, the N3 program began, and development of technology to connect the brain and machines bidirectionally without surgery advanced. In Battelle’s BrainSTORMS project, magnetoelectric nanotransducers are introduced into the body by injection, convert the electrical signals of neurons into magnetic signals, and send them to an external headset.

Conversely, when magnetic signals are sent from the headset, they are converted into electrical signals and stimulate neurons. The N3 program was declared complete in April 2026, but details have not been disclosed. If it had succeeded under a commander who ignores international law, it would be no surprise if it were being used against ordinary citizens.

The Current State of Nanoparticle Bidirectional BCI

A paper in March 2026 predicts that magnetoelectric nanoparticles will enable neuromodulation and recording of deep brain regions with submillimeter spatial resolution and millisecond temporal precision. In February 2026, a Romanian member of the European Parliament published a document stating that inhalable magnetic particles can read and write to neurons. In May 2026, it was reported that a DARPA adviser stated that inhalable nanoparticles could enable reading and real-time writing of the brain.

The Pyramid Structure of Perpetrator Organizations

The reason the perpetrators' identity is unknown is the same structure as bullying. The first layer is intelligence agencies, which outsource to private companies without dirtying their own hands. The second layer is the command center, where private companies and military leaders decide who to target and which attack method to use. The third layer is N3 soldiers, who monitor the victim's thoughts 24 hours a day, 365 days a year and attack at the most effective timing. The fourth layer is bystander collaborators moved by games and points, the fifth layer is bystanders who do not know about the perpetrator network, and the sixth layer is victims. Victims are preempted and turned away even when they go to medical institutions or government offices for help.

The Difference in Nanoparticles Between Perpetrators and Victims

Perpetrators can communicate bidirectionally through magnetoelectric nanotransducers, but victims receive one-sided physical attacks through iron oxide magnetic nanoparticles. Because N3's MEnT has a writing function, if misused it can send nightmare-like imagery and artificial sensations into the victim's brain. The ethics adviser of the N3 program warns that it is not unreasonable to recognize that this is basically mind reading and mind control. Soldiers who communicate with thoughts and victims who are attacked

after their thoughts are read appear to be opposites, but they are the light and shadow of the same technology.

Predictive Policing System ⑪: The Terrifying “Communication” Method with Invisible Perpetrators — The Structure of Domination Created by Thought Surveillance and Physical Attacks (Unfinished Version)

Why the Perpetrator’s Identity Is Unknown and the Staging of Consent

The reason the perpetrator’s identity is unknown is the same as bullying: it is designed so that the victim cannot know who the perpetrator is. If it is not known who is attacking, neither the police nor lawyers can act, and neither counterattack nor proof is possible. Threatening while deliberately hiding one’s figure when showing one’s face and talking would suffice is for staging consent. If the victim says they will obey, it can outwardly be made to look as if they consented voluntarily, and because the figure is hidden, no evidence of threats remains. Because emotions and thoughts are monitored, the most effective attack can be persistently continued until the other person says yes.

The Mechanism of Sound Attacks

Magnetoelectric nanoparticles settle in the brain and convert the electrical signals of neurons into magnetic signals and transmit them. AI analyzes this in milliseconds, and N3 soldiers share the victim’s thoughts through brain-to-brain communication. Because sound travels at about 340 meters per second, AI issues commands in advance so that the sound arrives at the moment the victim has a specific thought. For an airplane 10 km overhead, the command is sent 29 seconds before; for a motorcycle 2 km away, 6 seconds before; for an ambulance 1 km away, 3 seconds before. If the person thinks of counterattacking, a roar sounds; if they try to escape, an explosion sounds; if they try to seek help, a siren sounds. When this is repeated, the brain learns that thinking or acting brings unpleasant sounds and unconsciously stops thoughts. This is learned helplessness and self-censorship.

Surveillance and Physical Attacks on Trains and Buses

On trains and buses, the person is made aware of being watched through tactics such as riding at the same time, in the same car, from the same door irregularly; making eye contact for just a moment; positioning so that someone is always at the edge of the

victim's field of view; subtly matching actions; multiple people getting off from the same car at the destination station; and coughing at the timing when the person is thinking. The train stops at the moment the person becomes irritated by the harassment, making them recognize a huge enemy. It stops for several days and resumes when the person feels safe, planting self-doubt and gradually damaging trust. If the person can no longer go out, no matter how many rumors or bad reputations are spread around them, they cannot rebut them, and a character image that the person is bad can be created to justify attacks. This is the mechanism of advance destruction of credibility.

Body Hacking and Enclosure

Even if the person retreats into the home, body hacking continues the attack, and when they try to go out again, they are made to withdraw through back pain, joint pain, diarrhea, blurred vision, drowsiness, and other effects. After an inescapable closed room is created, the perpetrator reveals their true nature like a demon. As with sexual violence, the person is locked in, escape routes are blocked, and they are threatened that if they tell anyone, they will be killed. The genocide in Gaza was also carried out in a sealed boundary, a destroyed communications network, and a residential area with no escape. Hacking the smartphone to cut communications, block posts on social media, and intercept calls and emails—this is the invisible closed room. Although the person is not physically confined to a room, they are completely isolated in digital space.

Classical Conditioning and Voluntary Self-Destruction

When phenomena such as sound occurring when thinking a specific thought, the stomach growling, pain running through the body, and communications being cut are repeated in synchronization with thoughts, the brain learns that having a specific thought brings unpleasant things. The perpetrator conveys without words: I see all your thoughts, if you defy you will suffer, you cannot ask anyone for help, there is no way but to obey. Contradictory words and actions that seem at first glance, such as poor ordinary people supporting tax increases, or agreeing to war even though they will be conscripted, occur because they have learned that not saying so will bring even worse consequences. This is an extremely advanced technology of making people destroy themselves voluntarily. Driving U.S. soldiers into harsh defeats is also a mechanism for mentally driving people through gang stalking and making them voluntarily apply to become fascist soldiers or N3 soldiers.

The Structure and Two Faces of Perpetrator Organizations

Just as a bullying child acts like a good child in front of the teacher, perpetrators outwardly act as kind people in the community, serious public officials, and enthusiastic volunteers, and reveal their true nature once the victim is isolated. Perpetrator organizations have a pyramid structure of intelligence agencies, command centers, N3 soldiers, bystander collaborators, bystanders, and victims. The public face is a good person who dismisses the victim's complaints as imagination, and the hidden face accurately strikes weaknesses, drives the person into a corner with sound and physical attacks, and threatens them never to tell anyone. Because no one around them sees only the public face, the victim falls into an isolation with no escape. At the national level, it becomes fascism: counterterrorism and maintaining public order on the surface, and surveillance, repression, and massacre behind the scenes. Even when lies are exposed, they switch the subject by saying "that person is the bad one" or "actually I am the one being bullied," and shut down the victim's complaints with labels of fake news, conspiracy theory, and anti-Semitism. The mechanism for erasing guilt is also the same design as the Nazis, self-justifying perpetration through rewards, division of labor and anonymity, euphemism, immersion in the system, and approval from peers.

The Mechanism of Domination and Subordination

While saying security, the safety of ordinary people disappears; while saying maintaining public order, surveillance and repression spread. This is a safe society for criminals who are not pursued = a fascist society. Brain-to-brain communication produces rulers and slaves because perpetrators can connect like an invisible group chat through bidirectional brain-to-brain communication and attack while sharing the victim's reactions, whereas victims are one-sidedly monitored and their bodies hacked. The reason perpetrator groups can massacre without hesitation is that they are inside a powerful echo chamber created by brain-to-brain communication. One person's judgment is instantly shared with everyone, and there is no room to think of opposing opinions. Even if complete defense is difficult, knowing, recording, and connecting are the first resistance. Because perpetrators most want you to be isolated, not breaking connections is the greatest resistance.

Predictive Policing System ⑫: Why Do “People Who Do the Right Thing” Become Victims? — The Brain-to-Brain Communication Network That Manufactures War, Terrorism, and Election Fraud (Unfinished Version)

Victims Are Targeted Without Knowing the Reason

Perpetrator organizations operate through the six phases of organized targeting. In selection, people who try to whistleblow on wrongdoing by the government or those in power, people who oppose war, and people who resist fascism are judged inconvenient for society and put on a list. In surveillance, systems like Palantir’s ELITE integrate medical records, tax records, social media posts, purchase histories, and location information, and AI predicts the next action. In stalking, a strange man following the person, an ambulance passing at convenient times, and unknown-number calls create the illusion that maybe only oneself is strange. In destruction of credibility, rumors that the person is crazy or a conspiracy theorist are spread, and bystanders, out of fear of becoming targets themselves, side with isolating the victim. In attack, the victim is made out to be the bad person and violence is justified. In continuous surveillance, there is no escape even after moving because surveillance systems are everywhere. The state of not knowing is the most efficient form of domination.

Why Appeals Are Treated as If They Never Happened

Even if one appeals to the police, government, lawyers, or the media, they may be cooperative at first but later refuse cooperation, saying there is not enough evidence or that it is a civil matter. Sometimes the content of the consultation is leaked entirely to the perpetrator side. The moment the victim thinks of consulting someone, their thoughts are monitored, communications are cut, pressure is applied to the relevant parties, and the whistleblowing is buried. In April 2026, U.S. House members and others officially sent a letter of inquiry to ICE and the Department of Homeland Security, stating that Palantir’s technology is being weaponized against citizens and journalists engaged in constitutionally protected activities. No one suspects perpetrator organizations because they are disguised as cults and virtues. Cleaning toilets by hand, putting up signs encouraging early rising, doing farm work, sitting on church pews—while living an entirely ordinary daily life, they function as the lower levels of the brain-to-brain

communication network. The Japan Conference is a grassroots network with about 230 regional branches in all 47 prefectures, deeply penetrating local communities as a place of belonging for lonely elderly men. In a Diet answer in March 2026, Prime Minister Takaichi admitted that her own name appears 32 times in internal Unification Church documents. Many politicians at the center of political power are united with such organizations—this shows that organized penetration is nearing completion.

The Danger of the Brain-to-Brain Communication Echo Chamber

Ordinary echo chambers involve language, but brain-to-brain communication shares thoughts themselves, so room for rebuttal disappears. When values are shared directly as emotions and images without language, they are experienced not as another person's opinion but as one's own thought. Within the network, these values become absolute premises, and external facts and evidence are invalidated. Claims such as "there was no Nanjing Massacre" and "comfort women were prostitutes" are negative discourses contrary to historical fact, and here they are not treated as fact. They are given as examples of dangerous values shared within the brain-to-brain communication network, and their psychological and social mechanisms are analyzed. What enables preemption through real-time surveillance is the ability to intervene before action is triggered. Merely thinking of whistleblowing cuts communications, pressure is applied to workplaces and the media, and whistleblowing is buried. Field personnel such as motorcycle couriers, paramedics, and construction workers intentionally generate the sound of reckless motorcycles, sirens, and construction noise in time with the target's thoughts, interfere with even louder sounds when earplugs are used, and when the person tries to escape from the sound, hack the body to cause abdominal pain and spasms. This makes the person learn that no matter what they do it is useless and gives up resistance. This is an application of learned helplessness, a technique also used in the CIA interrogation manual KUBARK.

Rewards and Chains of Complicity

Perpetrator organizations recruit people by saying that if you want to be a winner, cooperate, and that you do not want to end up with a miserable life like the victims. In Israel, Gaza residents who provided information on the location of hostages were promised a reward of 5 million shekels (about 140 million yen) and departure from the country, and the surveillance network has published a program that pays students \$500–1,500 and doctors up to \$7,500 for information on individuals classified as anti-Semites.

In the Israeli military, a game was held in which soldiers competed over how many photographs of Palestinians they took, turning human rights violations into point-earning and making them participate in surveillance and informing without guilt. Holding weaknesses is also a powerful means of producing collaborators. The reason people become unreasonable rulers within the brain-to-brain communication network is that information asymmetry produces the sense of the eye of God and destroys empathy. Psychologist Dacher Keltner points out that having power lowers empathy and makes it easier to treat others as tools, and in the moral disengagement proposed by psychologist Albert Bandura, viewing the other person as an enemy or data makes one stop feeling guilt. Closed groups, confidentiality, strict hierarchy, and a culture of obedience cultivate values that emphasize loyalty and domination over empathy.

A Weapon That Manufactures War

Brain-to-brain communication leaves no evidence, unlike voice or documents, making it an unprecedentedly perfect weapon. Instructions are sent by thought, orders are shared within the brain, and no records remain at all. That is precisely why intelligence agencies and the military-industrial complex can freely start wars, independence movements, terrorism, and demonstrations. In 2024, the revenue of the world's top 100 weapons manufacturers reached \$679 billion, an increase of 5.9% from the previous year and a record high. President Zelensky himself has acknowledged that at least 75% of the roughly \$100 billion in U.S. military aid to Ukraine stays within the United States. War produces profit and profit produces war—this self-replicating mechanism is the essence of the military-industrial complex. People who try to leave the network are exposed to organized retaliation as a warning to traitors. In June 2025, Israel's Mossad created a list of 100 Iranian nuclear scientists, narrowed it to about 12, and assassinated at least 10. The reason investigation does not reach the masterminds is that there is a multilayer firewall like that of the mafia and yakuza. The true culprits can mostly be identified by their motives: cults steeped in ideology and war maniacs. They manufacture war, sell weapons, and expand domination under the beautiful names of security, counterterrorism, and defense of democracy.

Why Righteous People Become Victims and Election Manipulation

People who do the right thing may expose the wrongdoing of this system, expose the lies of war, and break the fiction of the echo chamber, so they are systematically put on a blacklist and treated as perpetrators even though they are victims. Marina Lacerda, a

victim of the Epstein case, was threatened immediately after disclosing sexual violence, called a liar and a prostitute, and her 12-year-old daughter was also bullied. Of the 23 accusers identified by Reuters, almost all have experienced threats and harassment. The reason war does not stop even though more than 70% of the people oppose it is that the predictive policing system prevents opposition and resistance before they occur. Once, a president unpopular with the people could be brought down, but the reason destruction cannot be stopped even though Trump is so disliked and was blocked many times is that opposition and resistance are all prevented in advance. The reason a far-right regime can win a landslide in an election even though there were many opponents is that it is possible by buying off election management committees and vote-counting managers and manipulating the results. In 2026, in South Korea, manipulation input was discovered in 47 local elections, 26 presidential elections, and 44 general elections, and in Pyeongtaek, Gyeonggi Province, there were physically impossible numbers such as 548 people increasing in one hour and even time-machine manipulation such as inputting the 4 p.m. turnout at 2 p.m. In Japan as well, in May 2026, it was reported by Shukan Bunshun that Prime Minister Takaichi's camp used AI-generated videos to denigrate rival candidate Shinjiro Koizumi during the party leadership election and general election periods, and the confirmed evidence reached 67 items, about 70% of which were intended to denigrate Koizumi. The reason there is no re-verification or redo even when fraud is discovered is that admitting fraud would fundamentally undermine the legitimacy of the regime. Election fraud is not an event on election day; it is a system that continues daily, in which the brain-to-brain communication network routinely collects the weaknesses of officials, echo chambers spread labels, social media and AI videos manipulate voters' emotions, and statistical manipulation is executed on voting day. That is precisely why knowing, recording, and discussing become the first defense.

Predictive Policing System ⑬: “Invisible Violence” Using Nanoparticles and the “Transhumanism” That Polarizes Humanity (Unfinished Version)

Graphene Oxide and Magnetic Nanoparticles

Graphene oxide is a sheet of carbon atoms arranged in a honeycomb pattern with oxygen-containing chemical groups attached, and it is a chemical platform for binding and carrying drugs and antibodies. Magnetic nanoparticles are three-dimensional particles made of iron oxide and are physical tools that can be manipulated by external magnetic fields. Magnetic graphene oxide, which combines the two, has both chemical bonding ability and magnetic manipulation ability. Magnetic nanoparticles and MGO, when entering the body, accumulate most in the liver and spleen, and graphene oxide is characterized by easy long-term retention in the lungs. There are data showing that MGO remained in the lungs, liver, and spleen even 90 days after injection, and there are reports that tissue damage was observed in the liver, spleen, kidneys, and other organs. Nanoparticles can accumulate in specific organs in the body and remain there for long periods.

Invisible Violence

When victims complain of gang stalking, they are told it is a hallucination of schizophrenia and forced into hospitalization, but this is fundamentally contradictory. Do bullying, ostracism, and discrimination against women not exist if the perpetrator cannot be identified? There are many forms of violence in the world that are invisible but certainly exist. This is even more true when using a kind of biological weapon like nanoparticles that is invisible and difficult to detect. Conversely, it is convenient for the other side if people believe that hostile forces do not exist, because they can deceive as much as they like. Invisible violence is a general term for things that are invisible and leave little evidence but actually harm people and destroy their health, minds, social standing, and lives. Johan Galtung, the father of peace studies, divided violence into direct violence, structural violence, and cultural violence. Even after visible violence ends, the structures and culture behind it continue to produce violence. In psychological manipulation, gaslighting and moral harassment drive the other person into a corner without leaving evidence. In digital space, algorithmic discrimination and surveillance capitalism are advancing, and responsibility becomes invisible by saying AI decided, and
